A. EXECUTIVE SUMMARY

Although entrepreneurship is crucial to a capitalist economy, little information is available about U.S. businesses in their first years of operation. As part of an effort to gather more data on new businesses in the United States, the Ewing Marion Kauffman Foundation sponsored the Kauffman Firm Survey (KFS), a panel study of businesses founded in 2004 and tracked over their first years of operation. The KFS collects data about the nature of new business formation; the characteristics of the strategy, offerings, and employment patterns; the nature of the financial and organizational arrangements of these businesses; and the characteristics of those who own and operate them. With the completion of the Third Follow-Up, the KFS has collected this information from the panel of diverse businesses over four years, providing a unique look at business dynamics over this formative period.

Summary of KFS Sample Design. MPR created the panel by using a list frame sample of new businesses selected from the Dun & Bradstreet Corporation (D&B) database. In 2005, we received from D&B two sampling frames containing a total of roughly 250,000 businesses started in 2004. From these lists, we selected a Baseline Survey sample (conducted starting in 2005 and completed in 2006), which we screened for eligibility and recruited into the study. In response to the Foundation’s interest in understanding the dynamics of high-technology and woman-owned businesses, the sample design for the KFS oversampled high-technology businesses (based on industry designation), and kept business ownership by gender consistent across all sample strata. Rather than a sample of new business founders, the unit of analysis for the KFS design is the sampled business, so that if the same business changed ownership from one reporting period to another, it would remain in the sample.

Questionnaire Design. Prior to the Baseline Survey, MPR conducted extensive questionnaire design, which is documented in the KFS Baseline Methodology Report.
(DesRoches et al. 2007). The design issues included establishing consistent definitions of what constituted the start of a new business, as well as testing the most efficient methods for collecting data from sampled businesses. The Baseline questionnaire contained a core set of questions that were repeated in future follow-ups.

The core questions repeated for the follow-up surveys focused on business characteristics, strategy and innovation, business structure and benefits, financing, and demographics of the owner-operators, which enabled us to track changes to how businesses obtain operating funds and perform over the first few years of operations. In contrast to the previous follow-up surveys conducted in 2006 and 2007, which included few changes to the questionnaire, the Foundation sought to add to the Third Follow-Up questionnaire new modules of questions that could enhance the usefulness of the data. A request for proposals that sought new areas of inquiry was issued in late 2007 to researchers studying entrepreneurship and innovation. These proposals were evaluated by the Foundation and MPR, and ultimately four sets of questions were added to the Third Follow-Up questionnaire.

Because sample attrition is a consistent challenge, we sought during the Third Follow-Up to shorten and refine the questionnaire so as to minimize respondent burden. This included having panel members simply confirm certain information gathered during previous rounds (rather than collect it again) and collecting new data only if the situation of the business had changed. Another strategy collected demographic information only from new owner-operators or from owner-operators for whom we did not already have it.

**Third Follow-Up Survey Data Collection.** Since the Baseline Survey had established eligibility for all the businesses in the panel, the only eligibility criterion for the 4,295 included in the Third Follow-Up was whether the business was still in operation. Specifically, the remaining businesses were those that completed the Baseline Survey (4,928), minus those
identified as permanently out of business during the First and Second Follow-Ups (633). Businesses identified as temporarily out of business in the previous follow-ups were included in the Third Follow-Up sample in case they had resumed operations since the previous interview.

As in previous rounds, panel members were contacted initially by email and invited to complete the KFS web survey. Those businesses without email addresses, or those who did not respond to the initial message, were sent an invitation through U.S. mail. As in prior waves, respondents were offered a post-paid $50 incentive for completing the Third Follow-Up. Among the remaining eligible businesses, 2,915 interviews were completed, which resulted in a weighted response rate of 83 percent. As in the two previous follow-up surveys, most interviews were completed on the web (65 percent), the rest (35 percent) through computer-assisted telephone interviewing (CATI).

**Data Processing and File Production.** To ensure the highest-quality data possible, we used rigorous coding, data cleaning, and MPR’s quality assurance (QA) methods when processing data collected during the Third Follow-Up. MPR staff performed the following steps to ensure that we delivered a clean data file:

- Examined the open-ended responses and, where possible, “back-coded” (moved responses placed in “other–specify” fields into fields that matched one of the prelisted response categories for the question).
- Coded the open-ended responses to the question on “primary industry of the business,” using the North American Industry Classification System (NAICS) taxonomy.
- Coded the open-ended responses to a new question on respondents’ field of study using the Classification of Instructional Programs (CIP) taxonomy.
- Reviewed answers to financial questions for consistency and corrected any obvious instances of double-counting of equity or debt amounts.
- Added constructed variables to the data set to facilitate analysis.
- Produced documentation to accompany the data file, including (1) a copy of the questionnaire, with related variable names listed next to the questions; and (2) a
memo listing the data source for variables not found in the questionnaire and describing the constructed variables.

- Combined the Third Follow-Up data set with the data collected during the three previous rounds to create longitudinal files for both public and restricted use.

**Weighting and Nonresponse Adjustments.** MPR statisticians adjusted the set of sampling weights and nonresponse adjustments developed during the Baseline Survey and refined after the First and Second Follow-Ups. These weights were then applied to the businesses in the Third Follow-Up panel. As a result of oversampling businesses in high-technology industries, a weighting factor (the inverse of the probability of selection) was required so that estimates collected during the data collection would reflect the true population based on the full D&B frame. The nonresponse adjustments to the weights were applied to account for those businesses that could not be contacted or interviewed. Using logistic propensity modeling and chi-squared automatic interaction detector (CHAID) analysis, MPR statisticians developed these adjustments for the final set of sampling weights. The final weights and adjustments were added to the longitudinal data file.
B. THE KAUFFMAN FIRM SURVEY: QUESTIONNAIRE DESIGN AND CONTENT

1. Introduction

The KFS is a unique research program dedicated to advancing understanding of the early years of new-business development. This goal has broad implications for the U.S. economy, since entrepreneurship plays a major role in the economic growth of the country, and accurate information about the development and sustainability of new businesses is essential to the design of public and private programs to encourage their creation. The KFS is also special because of the design and implementation obstacles that were overcome to produce these data. Accurate information about new businesses is not easy to obtain, and few previous surveys collected data on the dynamics of business development, since longitudinal surveys of new businesses often experienced serious sample attrition. Obtaining cooperation from owners of new businesses also made this type of survey difficult to implement, which resulted in low response rates. Such surveys have faced the added complexity of defining exactly what constitutes a new business and precisely when its operations begin, concepts that lend themselves to subjectivity if they are not carefully defined. To address these related informational and methodological challenges, and as part of its commitment to advancing entrepreneurship and studying the creation and development of new businesses, the Foundation contracted with MPR to conduct the KFS. Table 1 provides the key milestones of the project. Further information on the design and initial rounds of KFS data collection are available in the KFS Baseline methodology report (DesRoches et al. 2007), the First Follow-Up methodology report (DesRoches et al. 2008), and the Second Follow-Up methodology report (DesRoches et al. 2008).
2. Third Follow-Up Questionnaire Design

As part of its initial KFS questionnaire design, MPR developed a core set of questions to be asked annually of sampled businesses. Consequently, only minor adjustments were made to the First and Second Follow-Up questionnaires. Prior to the Third Follow-Up Survey, however, the Foundation issued a request for proposals to users of the KFS data and researchers in the entrepreneurship and innovation fields for modules of questions that could complement and
enhance the KFS data. Four sets of questions were submitted to the Foundation, and MPR evaluated these potential additions using several criteria: (1) the relevance and appropriateness of the topic area for the KFS panel, (2) the extent to which adding these questions would create excessive respondent burden, and (3) issues involved in administering the questions as submitted. This evaluation of the submitted questions is included as Appendix A. Ultimately, several new questions were included in the Third Follow-Up Survey, and these are described (along with the core KFS questions) below.

Questionnaire development for the Third Follow-Up Survey began in December 2007, and in March 2008 we pretested the new survey content on a convenience sample of 6 businesses. Questionnaire development was completed in April 2008. The final questionnaire consisted of seven sections, each of which is described below.

**Section A: Introduction.** This section introduced the study, the sponsor, and MPR as the organization conducting the study. It also verified that the correct business was reached and was still in operation. Section A also ensured that the respondent for the business (most often the respondent during the Second Follow-Up Survey) was an owner and operator of the business. Because the financial questions were quite detailed, it was important to identify a person sufficiently knowledgeable about the finances to provide accurate information. Therefore, this part of the questionnaire identified a current owner who was also involved in the day-to-day operations. However, since the respondent for the business could change from one survey round to the next, a mechanism for designating a new respondent was included in the section. Finally, the business address was confirmed. If respondents reported that the business had ceased operations, we asked the reason for the closing, whether the business had filed for bankruptcy, and in what calendar year the business closed.
Section B: Eligibility Screening. As with the previous follow-ups, there was no Section B, since business eligibility was established during the Baseline Survey.

Section C: Business Characteristics. The respondent was asked to confirm the legal status and primary industry description, which were pre-filled from previous rounds. If either was incorrect or had changed since the last interview, the respondent was asked for updated information. Other data collected in this section included the names of other owner-operators and the number of both full- and part-time employees. This section also asked about the type of location from which the business operates, reasons for any changes in location since the last interview, whether the business had opened another location, the number of locations the business operated in, and in what month and year the business opened any additional location.

Section D: Strategy and Innovation. This section included questions about whether the business offered a product or a service and whether the respondent believed that the business had a competitive advantage. A new series of questions, added in the Third Follow-Up, explored the competitive advantage the business had in terms of any teaming arrangements or intellectual property. Respondents were also asked whether the business owned or licensed any intellectual property, such as patents, copyrights, or trademarks, as well as whether they “licensed in” any intellectual property. Respondents were asked a series of questions about sales, such as whether the business had any sales during 2007 and what the percentage distribution was of such sales to individuals, government, and other businesses. New questions asked about the proximity of most customers to the business, the presence and percentage of international sales, and the presence and percentage of internet sales in calendar year 2007.

Section E: Business Organization and Human Resource Benefits. This section included questions about the number of employees who performed various functions within the business
and the types of benefits offered. The questions about benefits for full- and part-time employees were asked separately.

**Section F: Business Finances.** The business finances section was the focus of the questionnaire. Topics included:

- Equity investment by owner-operators into the business in 2007
- Total equity investment by owner-operators over the life of the business
- Withdrawals of cash from the business by owner-operators in 2007
- Percentage of ownership by each owner, for multiple-owner businesses
- Sources and amount of debt financing by the business and its owners
- Amount of revenue, if any, the business received in 2007
- Total expenses incurred by the business in 2007
- Total expenses spent on salary and wages
- Profit or loss during 2007
- Types of assets and liabilities and their estimated value

In addition to these core financial questions, new questions were added, including:

- Applications for new or renewed loans or lines of credit in 2007
- Approval or denial of credit applications, and the reason for the most recent denial
- Whether applications for needed capital were not filed due to fear of denial
- Amount of research and development expenses in 2007

**Section G: Work Behaviors and Demographics of Owner(s).** This section collected demographic and other information on the owner-operators. Respondents were asked whether they were paid employees and how many hours they worked in an average week. They were also asked how many years of experience they had in the industry of the new business and whether they had started other new businesses. The rest of this section collected basic demographic characteristics on the owner-operators, such as age, gender, race, education level, and
U.S. citizenship. For multiple-owner businesses, respondents were asked these questions about themselves and then about each of the other owner-operators. Added to Section G was a new question that collected the field of study for the respondent’s highest degree.

Finally, contact information was updated for future follow-up surveys. This included the name, address, phone number, and email address of someone to contact if we were unable to reach the business for the next follow-up. It also asked for an email address of the respondent and a website for the business. The name and address of the person to whom the incentive check would be sent was also recorded. At the conclusion of the interview, the respondent was thanked and told that the incentive check would be sent in two or three weeks. The final Third Follow-Up Survey questionnaire is in Appendix B.

C. SAMPLING DESIGN

1. Target and Study Population

For the Baseline Survey, the target population was all new businesses started in calendar year 2004 in the United States (including the District of Columbia). The baseline target population includes any new, independent business that was created by a single person or a team of people, or was the purchase of an existing business or a franchise, and excludes any branch or subsidiary owned by an existing or inherited business. As discussed in the Baseline Survey methodology report, the study population was further defined by the source of the sampling frame: the D&B database, which we chose because it is among the largest commercial lists available and offers information on linkages among establishments within enterprises (or businesses). In the Baseline Survey methodology report (DesRoches et al. 2007), we also discussed the screening process in the Baseline Survey to identify businesses that “started” in 2004.
For the Third Follow-Up Survey, the target population was the same as for the First and Second Follow-Up: all new businesses that (1) started in year 2004, and (2) met the survey eligibility criteria. The study population (as described above) was a subset of the target population in that the businesses had to have been listed in the D&B database with a start date of 2004. The Third Follow-Up Survey sample included all businesses that met the survey criteria and completed the Baseline Survey. In the Baseline Survey, the businesses that were refusals or unlocatable were possibly in operation after the initial year and are therefore part of our target population. The nonresponse adjustment procedures used on the weights for the Baseline Survey sample compensated for these refusals. Therefore, the Third Follow-Up Survey sample includes only eligible businesses from which we obtained complete data in the Baseline Survey, and this was the same sample we used in the First and Second Follow-Up. Specifically, businesses that did not respond to the First or Second Follow-Up Surveys were thus still included in the sample. Businesses that were identified as permanently out of business in the First or Second Follow-Up Surveys were also treated as out of business in the Third Follow-Up. The only difference between the Third and the previous Follow-Up Surveys is that businesses that were temporarily out of business in the First or Second Follow Up Surveys were given another chance in the Third Follow-Up Survey to complete the interview, though nearly 60 percent of them turned out to be permanently or temporarily out of business as well.

2. Sample Stratification

For the Baseline Survey, the D&B database was our source file for the sampling frame. We partitioned the file into six sampling strata defined by three industrial technology categories
(based on industry designation\(^1\)) and gender of the owner or CEO of the business (based on the data element in the D&B database and additional information; see DesRoches et al (2007) for details). In Table 2, we provide the estimated population count and sample count of businesses that met the survey eligibility criteria for each stratum.

**TABLE 2**

\(^a\)The estimated number of businesses is the weighted count of eligible responding businesses having a start date of 2004 and meeting the new-business-screening criteria (see DesRoches et al. 2007).

\(^b\)The sample count for the Third Follow-Up Survey included businesses that were determined to be permanently out of business, temporarily out of business, or refusals in the First or Second Follow-Up. Attempts were made to contact the refusals and the temporarily out of business from the prior follow-up surveys, but not the permanently out of business.

D. DATA COLLECTION PREPARATION

1. Overview

Preparation for the Third Follow-Up data collection generally followed the procedures used for the two previous follow-ups. In an effort to minimize KFS panel attrition, data collection materials, training manuals, and interviewer training continued to stress retention. Most of the Third Follow-Up panel members had completed the Second Follow-Up Survey (3,390 of 4,295, or 79 percent). Of the 903 who had not responded at the Second Follow-Up, 451 had not completed either of the first two follow-up surveys. We anticipated greater difficulties completing these cases given the length of time since last contact. Even though most panel members were likely to remember the study, we expected a somewhat lower response rate due to panel fatigue and the fact that a fifth of the businesses had not responded to one or both of the previous follow-ups. The data collection plan, as in previous rounds, started with an email alerting panel members to the web survey. Additional contacts included email reminders, an advance letter mailing, and postcards, followed by CATI for those not completing the web survey.

2. Respondent Materials Development

The goal for the Third Follow-Up Survey was to retain as many as possible of the 4,295 businesses remaining in the KFS panel. Our focus was to remind the panel members of their previous participation, repeat the information about the $50 incentive and the promise of strict confidentiality, stress the importance of the longitudinal nature of the study, and urge continued participation. We emphasized that their previous participation meant that the selection process was over and that we could not replace their business with another.

Another point of emphasis in the materials sent to panel members in previous rounds was the “Kauffman Firm Survey” title, which was included in all materials sent to respondents and
served as the first part of the email subject line. It had also been printed on all respondent gifts provided with the panel maintenance packets in the previous rounds. Our goal was to continue to “brand” the Kauffman Firm Survey name to increase recognition among panel members.

In keeping with MPR’s QA policies, draft survey materials for the Third Follow-Up Survey were reviewed by a senior MPR staff member outside the project. After comments from the reviewer were incorporated, the materials were sent to MPR’s editing department. Project staff finalized the edited versions before the survey director approved them for use in data collection.

The survey materials included:

- **Email Message.** We had collected email addresses at the end of each of the previous surveys, and we had email addresses for 83 percent of Third Follow-Up panel members. The initial survey contact was an email message to panel members who had provided an email address.

  The email message reminded them of their previous participation, informed them that we could not replace their business with another, and explained why we were doing the fourth year of the study. This message included their unique web login and password, as well as an easy “click-through” (pre-filled login and password) to the website to participate in the study. This procedure greatly reduced respondent errors during login and facilitated completion of the questionnaire. The email message also provided contact information for MPR staff in case of questions.

- **Reminder Email.** This was sent as a brief reminder to panel members who had not completed the web survey one week after the initial email message. This message also included the same web login and password information and “click-through” to the website as the initial email message.

- **Advance Letter.** The advance letter was the first contact with Third Follow-Up panel members who had not provided an email address in any of the previous rounds. It was similar to the email message, but provided additional information about the study, asked for cooperation, and provided web login information. And like the email message, it provided contact information for MPR staff.

- **Frequently Asked Questions (FAQs).** This one-page document provided answers to some questions panel members were likely to have about the survey, MPR, and the Foundation. This was also included with the advance letter.

- **Reminder Postcard.** The postcard was sent as a reminder to panel members who had not completed the web survey one week after the advance letter mailing. It listed the website URL and encouraged respondents to log on and complete the survey.
Because of confidentiality concerns, the postcard omitted the login and password, but it did include the project helpline to call for this information.

- **Refusal Letter.** This letter was sent to respondents who had refused to participate in the survey after being contacted by telephone, or who had refused through email or a call-in. It was the first effort at refusal conversion.

Copies of these data collection materials are in Appendix C.

3. **Interviewer Training Materials**

Modifying the Second Follow-Up materials as needed, project staff developed a set of training materials for the Third Follow-Up. These materials focused on issues we expected to encounter during the Third Follow-Up, such as how to designate a new respondent for the business if the Second Follow-Up respondent was no longer there or was unavailable during the data collection period, or if the business had not responded to one or more of the previous follow-ups. As noted in Section B, the instrument was designed to encourage the Second Follow-Up respondent to answer in the Third Follow-Up, assuming the person was still an owner and operator of the business. For businesses not responding to the Second Follow-Up, or in cases where that respondent was no longer with the business, previous respondents or others in the business who could complete the interview were prioritized as follows:

- First Follow-Up respondent
- Baseline Survey respondent
- Any owner-operators present with the business at Baseline
- Any new owner-operators identified during the First Follow-Up interview
- Any new owner-operators identified during the Second Follow-Up interview
- Any new owner-operators identified during the Third Follow-Up interview

Interviewers were trained to follow this priority if the Second Follow-Up respondent was not available or the business was a nonrespondent to that round. The training materials were updated
using the experiences from previous rounds to reflect the slight differences in the survey instrument.

The telephone interviewer training manual contained information about the following topics:

- The background of the study
- Eligibility criteria for respondents
- The importance of confidentiality
- The procedures for contacting panel members
- Procedures on scheduling appointments and requesting new letters or emails
- Dealing with privacy managers and cell phones
- Building effective engagement and rapport with panel members
- Refusal avoidance and conversion
- Strategies for handling “gatekeepers”
- Question-by-question review of the entire survey instrument

4. **Survey Operations Center Staff Training**

The telephone interviewing staff included both those who had worked on previous rounds of the KFS and those new to the project. All interviewers attended the full KFS training session regardless of their prior experience on the project. The training was conducted over 12 hours, in two 4-hour “classroom” segments and 4 hours of “hands-on” practice with the CATI survey. Emphasis was placed on the importance of the initial contact, introducing the study effectively, and moving directly into the interview. The hands-on practice consisted of paired “mock” interviews, where one trainee played the role of respondent and the other played the interviewer. To ensure that each pair of interviewers had the same experiences, project staff developed detailed mock scripts for the “respondents” based on experiences from previous rounds of data collection. Part of this practice involved “engagement scenarios,” in which pairs of interviewers
alternated between the respondent and the interviewer roles, but this time the focus was on overcoming objections and answering the questions that panel members were most likely to ask.

5. **Emails and Advance Mailings**

As noted in Section 2 above, the first contact made with 83 percent of the Second Follow-Up sample was the email message. For those without email addresses (and for those whose email bounced back), the first notice of the survey was the advance letter.

Both the advance letter, printed on MPR’s letterhead, and the initial email briefly introduced the study, reminded the business owner of the previous rounds, and asked for participation in the Third Follow-Up. They also supplied the project’s toll-free number, website URL, email address, and contact information to offer panel members the option of contacting MPR if they had further questions or if they preferred to call in to complete the survey or make an appointment to do so. Before each mailing was delivered to the post office, MPR inspected 10 percent of the packets for consistency and accuracy.

6. **Postcard Mailings**

One week after the advance mailing, a reminder postcard was sent to each sampled business that had not yet completed the web questionnaire. The postcard included the name of the owner and the name and address of the business. An overview of the study, the website URL, and MPR contact information were also provided, and panel members were encouraged to contact MPR if they had lost or forgotten their password or login ID. The postcard labels were generated through MPR’s Sample Management System (SMS). Before being mailed, postcards were also inspected for consistency with U.S. postal standards.
7. Response Protocols to Panel Member Inquiries

Prompt and efficient handling of inquiries from panel members helps establish rapport and thus increases the chances that they will complete the survey. As in previous rounds of the KFS, panel members in the Third Follow-Up could contact MPR through several avenues:

- Toll-free telephone number
- KFS email
- Project staff telephone numbers

The toll-free number was monitored by MPR’s trained “help desk” staff during business hours. A panel member could call in to complete the questionnaire on the telephone or make an appointment to have an interviewer call back and administer it. Another important function of the toll-free number was to provide the login ID and password to panel members who wanted to complete the web survey but had misplaced that information. Help desk staff were trained to identify each caller through a look-up file to make sure the person was indeed an owner of the sampled business. The survey director’s phone number was also provided in case help desk staff could not answer all the questions a panel member posed.

Some panel members and gatekeepers who were called requested that an email message be sent with information explaining the survey and how to participate. The email that was sent in response to such requests was the same one used in the initial email and the reminder email. It included the panel member’s password, login ID, and URL for the web survey.

Some panel members also emailed with questions about the study, explanations about their businesses, or refusals. In the period after email invitations had been sent to panel members, MPR staff monitored the KFS project mailbox seven days a week in order to respond to questions promptly. Responses were usually emailed within 24 hours of initial receipt of a panel
member’s email. When a panel member refused through email, staff would attempt a refusal conversion by addressing the stated reason, such as the amount of time the questionnaire would take to complete, and explaining the importance of the study.

8. **Respondent Incentives**

We offered panel members $50 to complete the Third Follow-Up (whether on the web or through CATI), the same amount as in the previous rounds. The incentive was offered not as a payment for the panel members’ time but rather as a “token of appreciation” for participation. We made this distinction because if the money was presented as compensation for their time, some owners might think the payment insufficient and refuse to participate. Instead, the incentive was presented as an honorarium, or a way of recognizing the owner’s contribution to the success of the study.

KFS incentive checks were mailed weekly to ensure that respondents received them promptly. Payments returned to MPR without forwarding information were sent to MPR locating specialists for address updating. Each check was then reissued and sent to the new business location. If a check was returned with forwarding information, the panel member information was updated in the MPR SMS, and the check was reissued.

During the Third Follow-Up data collection, a few panel members indicated that they did not recall having received their $50 payment for participation in one of the previous rounds. In all these cases, we determined that MPR had indeed sent the check to the respondent, although most had not been cashed. In these instances MPR staff would call or email back that the check had been sent but had not been cashed. We would then verify the address and send a new check. Some panel members wanted to receive their check from the previous round before they completed the Third Follow-Up Survey. MPR staff made sure that these panel members were contacted to complete the Third Follow-Up within a week of being sent the replacement check.
E. DATA COLLECTION

1. Overview

Data collection on the Third Follow-Up Survey closely mirrored that of the Second Follow-Up. Overall, the study continued to be successful in retaining panel businesses, achieving a response rate of 83 percent (weighted). We were also successful in slightly increasing the percentage of respondents who completed the web survey (65 percent in the Third Follow-Up compared to 63 and 59 percent in the Second and First Follow-Ups, respectively). Figure 1 illustrates the data collection process for the Third Follow-Up.

2. Timing of Sample Releases

Data collection began on June 24, 2008, and concluded on December 23, 2008. There were three separate batches of Third Follow-Up sample (dates and sample sizes are in Table 3). Each batch or “release” began with an email message to panel members.

Although the web and CATI instruments were thoroughly tested before data collection began, the first sample release was deliberately small to permit a live test of the instrument and the systems involved in recording completes and refusals and in generating mailings.

The initial email message displayed the subject line “Kauffman Firm Survey—Round 3.” The reminder email had the same text as the initial email. For all but the first release, the emails were sent out over two days to prevent triggering various spam filters. This also spread out the web response to avoid overloading the server and preventing some panel members from being able to log in. Of the advance emails, 14 percent (492) bounced back as undeliverable. Project staff examined email bouncebacks for obvious misspellings or other problems, corrected 106 and re-sent the email messages to the updated address. As in the previous rounds, MPR project staff conducted daily testing of the KFS website just before sending batches of emails.

In addition to bouncebacks from emails, some of the U.S. Postal Service addresses to which the advance mailing was sent were not accurate, and the materials were returned. When the returned mail included an updated address, this was recorded in the MPR SMS, and the materials
were re-sent. When there was notification of “no such address,” the existing address was recorded as inaccurate to prevent any re-mails, and that panel member case was sent to locating staff to search for the new address.

3. Schedule of Contacts to Panel Members

As mentioned above, 83 percent of business owners received their first contact about the Third Follow-Up through an email message. One week later, the advance letter was sent to all businesses that had not completed the web questionnaire. For the businesses that had not provided an email address, or whose email address had changed or expired, this was the first contact about the Third Follow-Up Survey. One week following the advance letter, we sent a reminder postcard. A week after this reminder, CATI operations began. We spaced these initial contacts as we did so that panel members would have time to log on to the web and complete the survey before CATI follow-up began, thus minimizing CATI costs. About 23 percent of panel members had completed by web before CATI operations began, which was less than during the Second Follow-Up (31 percent).

During CATI follow-up, MPR’s call scheduler program provided the panel member contact information needed by interviewers to make telephone contact. This scheduler assures that callbacks are conducted at the appropriate time, and that telephone attempts that do not result in contact, such as answering machines and “no answers,” are recontacted on different days of the week, at different times of the day and evening, and on weekends. An answering machine message tailored specifically to the KFS was also left at periodic intervals. These intervals were designed to avoid irritating the panel member, and they also gave the panel member time to respond to the message before the next call. Cases with wrong numbers, and those with a series of no contacts, were sent to locating for updating. Along with setting scheduler parameters,
sending emails on request, and following other procedures, a variety of additional steps helped make CATI more efficient.

4. Survey Management Techniques

Survey management is designed to make CATI as efficient as possible by scheduling, monitoring, and evaluating the survey procedures. One of the most important aspects of efficient interviewing is properly matching the available sample and interviewer hours, so that panel members are called shortly after they receive the advance materials. To this end, project staff coordinated training schedules and sample releases with interviewer schedules. This coordination helped to ensure that interviewer hours were highest when new sample was released, so that the initial telephone contact with the panel members took place at the most opportune time. Project staff conducted weekly reviews of interviewer productivity, cooperation rates, calls per hour, and monitoring reports.

Although we achieved a high response rate in the Third Follow-Up, many businesses either were still reluctant to participate or put off completing the questionnaire. As in most surveys, the final 10 percent of completes took considerably more resources than the first 90 percent. As the Third Follow-Up Survey was coming to an end, the remaining nonresponding panel members had been provided multiple opportunities to respond. They had been contacted, and interviewers had made their best attempts to complete the interview with them. To maximize the response rate, KFS project staff implemented the following steps for nonrespondents:

- **Sending a series of email messages** indicating that the study was coming to an end and that their time for participation was limited. This email also stressed that we had already received responses from a sizable percentage of panel members.

- **Sending an additional letter** to pending cases, emphasizing that the project needed their participation, reminding them of the $50 incentive and their previous participation, and asking them to complete the questionnaire. The envelope also contained a $5 bill as a pre-incentive.
• Adjusting interviewer schedules to ensure that cases in the Pacific Time zone received sufficient call coverage.

• Developing a special answering machine message to replace the initial one, indicating that the study was ending and that this was the last opportunity to participate.

After these efforts were made, data collection on the Third Follow-Up Survey ended on December 23, 2008.

5. Refusal Conversion

Because the Third Follow-Up Survey was the fourth annual survey, KFS respondents usually remembered the previous surveys and required little persuasion. Nonetheless, there were some refusals, which necessitated a refusal conversion effort.

Attempts to convert refusals help ensure that those completing the survey are representative of all sample members. Without refusal conversion, results could be skewed toward people who like to do surveys or who are interested in the particular topic. Such sample members may answer the questions differently from people who initially refuse to participate in a research study. To obtain as representative a sample as possible, we used refusal conversion techniques to persuade and convert panel members who initially refused.

First, all refusal cases were put on hold for 14 days, during which a refusal letter was sent, acknowledging the refusal but emphasizing the unique nature of the study and the importance of participation. The survey website URL was provided in the letter, along with the panel member’s password and login ID. After the waiting period, if the panel member had not completed the survey on the web, interviewers trained in refusal conversion techniques called the business. Refusal conversion training was conducted for KFS interviewers who had demonstrated the ability to build rapport and had higher-than-average cooperation rates.
Project staff reviewed refusals periodically, especially the few adamant first refusals, to determine whether they should be finalized without a conversion attempt. These reviews were conducted by the survey director, who used her judgment to strike a balance between avoiding calling people who were vehemently opposed to another call and giving business owners a chance to change their minds.

When businesses refused again after the conversion attempt, project staff examined the cases and put them into three different categories: (1) cases that might be converted by additional attempts, (2) cases that should be finalized for the Third Follow-Up but could be tried again during the Fourth Follow-Up, and (3) cases that should be finalized and not contacted again. Of the 4,295 cases in the Third Follow-Up, 352 initially refused, of which 46 (13 percent) were converted and completed the questionnaire.

6. Handling Special Cases

Several other types of cases that required special handling and review are described below. These were assigned to interviewers with special training on how to resolve them.

a. Owner-Name Cases

After the Second Follow-Up Survey, there were 25 panel members who did not provide a full first and last name for one or more owner-operators. Being able to track individual owners through the early years of the business allows us to learn about the makeup of the ownership team that runs the business, and is an important analytical focus of the KFS. Therefore, cases that had owners without full first and last names were separated out and designated as “CATI-only.” We did not want these cases completed on the web, because we would not be certain we could properly identify all owner-operators involved with the business. For example, in some of these cases, respondents had used initials or other identifiers, such as “Owner 2,” but we needed a first
and last name. If the respondent insisted on such a designation, we needed assurance that the person identified as “Owner 2” in previous rounds was the same as “Owner 2” in the Third Follow-Up. This process would also ensure that the proper demographic questions were asked.

These cases received a special letter that provided MPR contact information should they have any questions about the study or concerns about confidentiality. The letter also informed them that a professional telephone interviewer would be calling them shortly. Specially trained interviewers called to conduct the interview and try to obtain the complete names of all owners.

b. No-Suitable-Owner Cases

A limited number of panel members (15) had no identifiable owner-operator in the Third Follow-Up because the business was wholly owned either by silent partners or by owners those who hired a manager to run the business. In these instances, the CATI supervisor reviewed the cases and referred them to the survey director, who would decide whether or not the interview should be completed with a manager.

c. Web Partial Cases

Web partials were cases in which the panel member logged on to the questionnaire on the web, completed one or more questions, and then logged off before finishing. Panel members partially completing the questionnaire were contacted by highly experienced interviewers who proceeded as follows:

1. Examined the case before calling, to learn at what point in the questionnaire the panel member had broken off. This enables the interviewer (1) to tell the panel member how much longer the interview will take to complete, and (2) to get to the first unanswered question quickly if the member agrees to complete the questionnaire.

2. Called the panel member, acknowledging that he or she did partially complete the study. Interviewers are trained to emphasize the business’s previous participation and the $50 incentive, and to offer to have the panel member complete the survey over the phone. Interviewers informed the panel member how much time it will take to
complete the questionnaire and assured the member of the confidentiality of the survey data.

3. Emphasized to anyone other than the panel member answering the phone that the panel member has already completed part of the questionnaire.

4. Included concise and complete notes for cases in which the panel member was contacted but did not complete the questionnaire.

In addition to these groups of cases, there were rare occasions such as when the web server went off-line for maintenance. After these occurrences, the project mailbox received email messages from panel members who had tried unsuccessfully to log on to the web to participate in the survey. Project staff responded quickly to these messages, apologized to the panel members affected, and let them know when the problem had been solved so they could log on to complete the interview.

7. Monitoring Interviewer Performance

Monitoring interviewer performance helps improve data quality and also provides an opportunity to improve interviewer techniques on panel member engagement and refusal avoidance. The monitoring process also helps identify unanticipated issues and provides support for interviewers who have questions about individual questionnaire items.

MPR emphasizes the importance of the monitoring process, and the MPR monitoring software allows the monitors to enter evaluations of interviewer performance into the system easily, where it is stored for retrieval by supervisors and project staff. So that they fully understood the project requirements, all Third Follow-Up Survey monitors attended the interviewer training. At the beginning of the data collection, project staff closely monitored interviewers to evaluate the performance of the questionnaire and to provide feedback on the performance of individual interviewers. Afterward, 10 percent of the interviewers’ work was monitored.
Monitoring consisted of listening carefully as the interviewer engaged the panel member or gatekeeper, while also observing the interviewer’s CATI screen to check for accurate coding and correct computer logic. After the monitors observed the interviewer and prepared evaluations, they would meet with the interviewer to review the case, point out interviewer strengths, and suggest improvements.

Monitoring reports were generated weekly and included such data as the number and type of mistakes each interviewer was making and the number of positive comments made by the monitor. Because of the generally high experience level of the interviewers and the high cooperation rates, monitors reported few problems with the interviewers or with the survey instrument.

An interviewer debriefing was conducted toward the end of the data collection period. Interviewers reported that the success of the Third Follow-Up was due to (1) the fact that respondents were familiar with and interested in KFS, (2) the incentive, and (3) prompt follow-up by project staff on missing checks from previous surveys. They also mentioned that the best refusal conversion technique was to emphasize that the interviewer would conduct the interview at a brisk pace out of respect for the owner’s busy schedule.

As another step to ensure quality, data were reviewed at two benchmarks—after the first 50 interviews and again after about 250 had been completed. Project staff reviewed the data to examine skip patterns, “other–specify” fields, and other items for accuracy.

8. Locating

Cases that require locating may be systematically different from those that do not. Some new businesses will never become fully established, and others will move or change phone numbers, sometimes because they are home-based and the business owner moves. To ignore businesses that have moved or changed contact information runs the risk of excluding businesses
that differ from those that are easier to contact. For the Third Follow-Up, a substantial locating effort was made to find each listed business that could not be contacted using the information collected during the previous rounds. To update the existing contact information about sampled businesses or principals, the KFS locators used zip key, directory assistance, Lexis-Nexis, Accurint, and other web searches. Through a systematic use of these resources, locators could sometimes determine whether a business was still operating and would find updated contact information. If cases were confirmed as still being in business, they were returned to interviewing for additional attempts. A supervisor would examine a case without any new leads to determine what further action, if any, should be taken. Cases for which there was no good contact information were ultimately coded as unlocatable.

The MPR SMS was the clearinghouse for information about locating attempts, as well as all email and mail contacts attempted with panel members. Each email, letter, and postcard that was sent to panel members was recorded, as were new addresses, phone numbers, and owner names. Information gathered by telephone interviewers was also recorded in the SMS. For performance evaluation, the SMS also has management tools that allow locating supervisors to measure the effectiveness of individual locators. Finally, the SMS allows supervisors to review cases that had multiple contact attempts and, when no further locating action is warranted, to finalize them as “unlocatable.”

During the Third Follow-Up Survey, 743 cases (17 percent of the total sample) required some degree of locating efforts. Of these, 159 were finalized as unlocatable, which means that 79 percent of all cases sent to locating were found.

9. **Response Rates**

Response rates are often used as measures of the “potential” for nonresponse bias and of the quality and the validity of survey data. In general, unweighted response rates measure the
proportion of the sample that resulted in usable information for analysis. Weighted response rates represent an estimate of the proportion of the survey population for which usable information is available. The weighted response rate is also considered to be a measure of the potential for nonresponse bias. Because we oversampled businesses in the high-tech sampling stratum, the weighted response rates may differ from the unweighted ones. To compute the response rate for the Third Follow-Up Survey, we used a standard algorithm recommended by the American Association for Public Opinion Research (AAPOR). In this computation, the unweighted response rate is the count of the number of completed interviews among eligible businesses divided by the estimated total count of eligible businesses (the weighted response rate is comparable with weighted counts used instead of the unweighted counts). For the KFS, we provide these response rates using two definitions of eligibility:

1. Businesses that met the survey criteria, started in 2004 and (for the unweighted response rate) completed the Baseline Survey, and are in operation at the time of data collection.

2. Businesses that met the survey criteria, started in 2004 and (for the unweighted response rate) completed the Baseline Survey, and are in operation at the time of data collection, plus businesses that were not operating at the time of data collection.

The two definitions differ only in that the second includes businesses that were not in operation at the time of the survey.

---

2 The response rate definitions recommended by AAPOR are available at [www.aapor.org/uploads/standarddefs_4.pdf].

3 For a weighted response rate, the numerator and dominator are population-level estimates, and the weighted response rate is a measure of the potential for nonresponse bias in survey-based estimates, because it measures the proportion of the population that provided data. For the unweighted response rate, the numerator and dominator are sample-level counts and therefore need the restriction of “completed the Baseline Survey.” The unweighted response rate is essentially an operational measure of data collection success, rather than a measure of the quality of the survey or the survey estimates.
Using the AAPOR response rate algorithm (specifically, AAPOR’s Rate #3), we assumed that all businesses with unknown eligibility (under either definition) would be eligible at the same rate as businesses for which we obtained sufficient information to define eligibility. The AAPOR response rate under the first eligibility definition is:

\[ RR_1 = \frac{\text{Completes}}{\text{Completes} + \text{Elig. Non-completes} + \text{Unknown Elig.} \times \text{Est. Elig. rate}} \]

Where estimated eligibility rate is defined as:

\[ \text{Est. Elig. rate} = \frac{\text{Completes} + \text{Elig. Non-completes}}{\text{Completes} + \text{Elig. Non-completes} + \text{Ineligibles}} \]

Businesses that had unknown eligibility either were unlocatable or were located but did not respond. Ineligible businesses were those that were non-operational at the time of the survey. The eligible non-completes were eligible for the Third Follow-Up but refused to participate (such as a “break-off”). Because eligibility was determined as part of the interview and there were no break-offs, the number of eligible non-completes was zero.

Under the second eligibility definition, the AAPOR response rate is computed:

\[ RR_2 = \frac{\text{Completes + Non-operational Businesses}}{\text{Completes + Non-operational Businesses} + \text{Elig. Non-completes} + \text{Unknown Elig.} \times \text{Est. Elig. rate}} \]

Where estimated eligibility rate is defined as:

\[ \text{Est. Elig. rate} = \frac{\text{Completes} + \text{Non-operational Businesses} + \text{Elig. Non-completes}}{\text{Completes} + \text{Non-operational Businesses} + \text{Elig. Non-completes} + \text{Ineligibles}} \]

Once again, the difference between the two response rates, \( RR_1 \) and \( RR_2 \), is that in \( RR_2 \) the businesses that are not in operation at the time of the survey were classified as eligible.
Of the 4,928 panel members from the Baseline Survey, we completed interviews with 2,915 eligible businesses and identified 1,174 that were no longer in business. The other 839 cases had unknown eligibility (refusals or unlocatables). Because there were no eligible non-completes, the two equations are algebraically the same. The overall unweighted AAPOR response rate is computed as 83.0 percent; under the second definition, it is also 83.0 percent.

When the sampling weights are incorporated, the weighted AAPOR response rate is 82.5 percent under both eligibility definitions. Table 4 shows the unweighted/weighted response rates across the three technology sampling strata under both definitions.

*As noted in the text, response rates $RR_1$ and $RR_2$ were equal because there were no businesses classified as eligible non-completes.

Second Follow-Up. Businesses that responded in neither the First nor the Second Follow-Up achieved a 31.2 percent (unweighted) and 31.2 percent (weighted) response rate in the Third Follow-Up; businesses that responded only to one of the first two Follow-Up Surveys achieved a 56.6 percent (unweighted) and 58.2 percent (weighted) response rate in the Third Follow-Up; businesses that were First and Second Follow-Up respondents achieved a 91.7 percent (unweighted) and 91.1 percent (weighted) response rate in the Third Follow-Up. Clearly businesses that did not respond in the previous rounds were much less likely to respond in the next. We expect that in the next rounds, it is even less likely that they will respond if they did not respond in multiple consecutive rounds. In any longitudinal survey, the serial nonrespondents are the most difficult group from which to obtain completed responses.

### 10. Longitudinal Response Rate

Because of the longitudinal design of the KFS, we also report the longitudinal response rates. A longitudinal respondent is defined as a business that responded to the First, Second, and
Third Follow-Up Surveys. The longitudinal response rate is the count (or weighted count) of respondents in the First, Second, and Third Follow-Up Surveys as a proportion of the count (or weighted count) of eligible businesses at the time of the Baseline Survey. As was the case for the response rates for the cross-sectional Third Follow-Up Survey, the longitudinal response rates are the same under the two eligibility definitions. Table 6 gives the longitudinal response rates under the two eligibility definitions.

<table>
<thead>

</table>

*As noted in the text, response rates $RR_1$ and $RR_2$ were equal because there were no businesses classified as eligible non-completes.

11. Panel Maintenance

The strength and the uniqueness of the KFS data are the longitudinal information they provide for analysis. To minimize panel attrition between surveys, we made a significant effort to express appreciation to panel members through both an incentive and a “post survey” mailing. The $50$ incentive was one way both to thank respondents for participation in each survey and to encourage participation in future follow-ups. The “panel maintenance packet” was another technique. For the Third Follow-Up, this packet consisted of a letter of appreciation and a 2009 calendar with the study name and contact information printed on it. The letter thanked
respondents for completing the survey and reminded them of the interview in the upcoming year. It also contained contact information for MPR’s survey director. So that it would not be discarded or ignored as just another piece of junk mail, the panel maintenance packet was designed to appear attractive and important: the envelope carried a first-class stamp instead of the bulk rate imprint common to mass mailings.

For the Third Follow-Up, 2,915 panel maintenance packets were sent in January 2009. As with previous surveys, these generated some returned packets, some of which contained updated addresses. Those addresses were recorded and the packets re-mailed.

Another procedure for reducing panel attrition was to deal promptly with respondent requests, especially when dealing with incentives provided to respondents. During the Third Follow-Up, if respondents called in to say they had not received their $50 incentive, MPR staff would check through the MPR respondent payment system to see whether a check had been mailed and, if yes, whether it had been cashed. Often checks were sent but not cashed, so staff would verify the address information. Any missing address information, usually a suite or apartment number, was obtained and entered into the SMS, and the checks were reissued. This updated contact information was collected and stored for use on future follow-up surveys.

F. CODING AND DATA PROCESSING

1. Overview

   As with other Third Follow-Up operations, the coding and data processing were aided by the processes created in earlier rounds. The previous programs and procedures were used during the Third Follow-Up, and many needed little or no updating. High-quality coding and data-processing procedures help to provide the highest-quality data file for analysis.
2. Back-Coding

Seventeen questions in the Third Follow-Up Survey contained open-ended responses, with all but one having an “other-specify” alternative if respondents did not think their answers fit into one of the existing categories. Each of these verbatim responses entered by the CATI interviewer or, on the web survey, by the respondent was reviewed for possible back-coding. Back-coding—the process of determining whether the answer actually fits into one of the existing categories—reduces the percentage of responses in the “other” category, providing a higher level of specificity and data quality. Sometimes respondents do not hear all the answer categories during a telephone interview, do not read them carefully on a web survey, or interpret a category incorrectly. Although some responses could not be back-coded, many could. Qualified and experienced coding staff performed the back-coding of the “other-specify” responses to these questions:

- A10 (Reason for being out of business)
- C1z2 (Form of legal status of business)
- C8 (Primary location where business operates)
- C9 (Reason for change in location)
- E1h (Key responsibilities of employees)
- E2a.1 (Employee benefits provided to full-time employees)
- E2b.1 (Employee benefits provided to part-time employees)
- F3g (Sources of equity)
- F7f (Sources of respondent debt)
- F9f (Sources of other owner debt)
- F11k (Sources of debt of the business)
- F28g (Other business owner property)
- F28h (Other assets)
• F30c (Other liabilities)
• G6 (Race)

Since these questions had been used in previous rounds, the back-coding in the Third Follow-Up used the results from back-coding of the previous rounds as a guide, thus maintaining consistency.

3. Industry Coding

Question C1b (principal activity of the business) is used to determine the North American Industry Classification System (NAICS) code.\(^5\) The Third Follow-Up asked respondents to confirm the industry description for their business, which had been obtained during previous survey rounds. If the respondent disagreed with the primary industry description, the web questionnaire (or telephone interviewer) asked for an updated description. Coders then reviewed these verbatim descriptions and identified the most appropriate NAICS code. MPR used coders with substantial experience in industry and, specifically, NAICS coding, and they were instructed to leave the six-digit code from the Second Follow-Up if they could not code to a six-digit NAICS based on the description collected during the Third Follow-Up.

As in the previous rounds, the next step was to ensure that the NAICS descriptions for the updated NAICS code were entered into the case records. This required obtaining the listing of NAICS codes and associated descriptions, matching them to the cases with updated NAICS codes, and data the matching description into the data file for that business. This revised description was put into place for use on the Fourth Follow-Up Survey.

\(^5\) The NAICS system, developed by the U.S. Census Bureau, is the standard establishment classification for all federal surveys, replacing the Standard Industry Classification codes. See [www.census.gov/epcd/www/naics.html] for more information on NAICS.
4. **Financial Data Coding**

Financial data back-coding presented a number of challenges during the Third Follow-Up. Not all owners of new businesses have a clear understanding of financial accounting, asset categories, or even the difference between debt and equity. While the numbers of cases with this problem decreased in the Third Follow-Up, some complex cases that required review by project staff still existed.

Because the questions in the business finances section included dollar values, back-coding these also required adding the amount of the back-coded question to the appropriate response category. For example, if a respondent indicated in the “other–specify” for equity investment that “Dad” had invested $10,000 in the business, the $10,000 would have to be added to any amount already entered into the section that recorded amounts invested by “parents, in-laws, or children of owners of the business.” Many of the financial back-codes were obvious after review by the survey director. In addition, the programs developed during the previous rounds of coding were used to correct these problems. The programs moved the back-coded responses from the “other–specify” field into the correct response category and added the related dollar amount into the proper field. This allowed the response and the corresponding amount to be back-coded to the appropriate category.

Responses to some other questions were somewhat more complex. For example, many respondents did not make a clear distinction between the two “other asset” categories in Question F28, and these had to be adjusted as well. “Any other business property” (F28g) was designed to record tangible assets, while the “any other assets” category (F28h) was designed to record intangible assets such as patents, trademarks, and copyrights, as well as financial assets such as long-term bonds.
Some of the “other-specify” fields required extensive review and case-by-case recoding. In some cases, account balances had to be moved from debt to equity and vice versa. When the intended response was not clear, responses were kept as reported, but when it was clear that the respondent had put account information in the incorrect response category, appropriate adjustments were made to the data for that case.

5. **Field of Study Coding**

As discussed previously, we collected field-of-study information about respondents’ highest postsecondary degree in the Third Follow-Up (Question G9a and Question G9b). MPR coded the verbatim responses using the Classification of Instructional Programs (CIP) taxonomy. MPR coders reviewed each verbatim and, using a database of CIP codes, assigned the most appropriate six-digit code, which is the most specific level of CIP code. MPR assigned coders who had substantial experience in coding field of study on other MPR studies.

6. **Quality Assurance Procedures for Coding**

Quality Assurance (QA) is included in all MPR’s survey operations and was also used throughout the KFS coding process. The coding supervisor reviewed all work completed by coders and made corrections before sending the results to the survey and project directors, who reviewed all coded cases. We included comments on any cases that were changed during the QA review, so that the coders would have feedback for future rounds. These were primarily reminders about procedures for handling responses that could not be back-coded. As mentioned above, QA checks were also made between the Third Follow-Up codes and those of previous rounds to ensure consistency across rounds. One of these checks was the owner number: because

---

each owner-operator is identified by a unique ID number, project staff ensured that the same number was assigned to that owner in the Third Follow-Up.

MPR programmers tested all back-coding programs on a test data set for accuracy prior to adding the updated codes from the live data into the file. Both the programming and the project staff examined the adjusted data set to make sure that all changes were made accurately and that each step of the process was documented. Both were checked to ensure that the new descriptions were accurate. Additional checks were performed to ensure that back-coded financial items and their associated amounts had been properly transferred.

Project staff also looked for common “other–specify” answers to any question, to determine whether sufficient responses existed to form a new response category in the Third Follow-Up. If a response to an “other–specify” category appeared in at least 3 percent of the cases, the addition of a new response category would be considered. As in previous surveys, however, no Third Follow-Up question had an “other–specify” response that reached this threshold.

7. Data Cleaning and Frequency Review

To ensure data quality across all rounds of the KFS, the Third Follow-Up used the same set of specifications developed to machine-edit the data in previous rounds. These computer edit specifications began by checking the skip patterns and consistency checks in the CATI questionnaire, which were then expanded at each round to cover other data consistency issues identified.

After these cleaning specifications were finalized, they were programmed into SAS and applied to the original, unedited data. After these processes were completed, a set of frequency distributions was generated and then reviewed by project staff for quality control to ensure that the cleaning statements were implemented properly and to check for any other data inconsistencies.
During the initial review of the frequencies, inconsistent data values were noted for revision. Inconsistent values usually came from web cases since, to avoid increasing respondent frustration that can result in not completing the questionnaire, the web program had fewer built-in data checks than the CATI program. The frequency review also served as a final check that “other–specify” responses were back-coded properly, with any additional responses that could be back-coded noted so that they could be corrected. After the initial review, we compiled a list of values to be edited, and these were implemented through SAS. To ensure that all inconsistent values were corrected, we produced a second set of frequency distributions after cleaning.

Once the Third Follow-Up data file was finalized (all cleaning was completed and reviewed) and the constructed variables were added (discussed in the next section), the Third Follow-Up data were added to the KFS longitudinal file. Third Follow-Up variables were given a “_3” suffix to distinguish them from variables from earlier data collection rounds. This combined file went through a final quality control review to ensure that the process of combining the two files did not create any unexpected errors or complications. The longitudinal file was provided to the KFS data enclave for restricted use by approved researchers.

8. Constructed Variables

For the Third Follow-Up data, we produced a set of constructed variables using the procedures created in the previous rounds. These variables consolidated data reporting in questions with different levels of specificity in order to facilitate analysis of these data. Below is a review of the different categories of constructed variables.

a. Financial Measures with Three Levels of Data

When asked about different sources of business financing, such as equity or debt, respondents were first asked whether these sources were used (an “indicator” question).
Respondents reporting that the business had used one of these types of financing were then asked for an exact dollar amount for the reference period. Respondents unable or unwilling to provide an exact dollar amount (either through a “don’t know” or “refused” response in CATI or by not answering a response field on the web) were provided a set of ranges and asked to select the appropriate one. The goal of constructing variables for these financial measures was to combine these values into one variable that would inform researchers about both the incidence of usage and the amounts used or acquired during the reference period. Respondents answering “no” to the indicator question were given a “0” in the constructed variable. For exact-value responses, the value associated with the range the value fell into was placed in the new constructed variable. For example, if a respondent indicated that the business had a year-end personal credit card balance of $20,000 (question F8b), the value “6” was placed in the constructed variable, indicating the range $10,001 to $25,000. For respondents who gave a range response to the question, these values were placed in the constructed variable as is.

b. Financial Variables with Two Levels of Data

We also created constructed variables for measures that did not include an indicator variable, such as total expenses (F17) and total wage expenses (F18). For these constructed variables, we used the process as described above to translate exact values into ranges.

c. Variables Summing Financial Measures

The KFS instrument asked about equity and debt in terms of specific sources, such as from owner-operators, family members, banks, and other organizations. By summing all discrete sources falling into a particular category, we created a set of constructed variables that provided subtotals of equity and debt provided by owner-operators and non-owner-operators, as well as a total from all sources.
d. **Intellectual Property Measures**

The KFS questions on patents, copyrights, and trademarks asked an indicator question for each type, and businesses that reported having these types of properties were asked how many they had. The constructed variables were created to provide both the incidence and the quantities of these items by entering a “0” for cases reporting no patents, copyrights, or trademarks, and for those reporting them, the number of the specific type was entered into the constructed variable.

Once the constructed variables were created and reviewed for quality control, the clean data file was provided to MPR statisticians so that the survey weights and nonresponse adjustment variables could be added.

9. **Preparation of Codebook and Data Documentation**

The main codebook for the Third Follow-Up Survey is the questionnaire, which was annotated to include the variable names in the data file next to the appropriate questions from which the variables were derived. An annotated questionnaire was created for use with the restricted-use longitudinal data file, which is in Appendix D. A full list of the variables constructed for the Third Follow-Up data file, as well as more about their construction, is in the data documentation memo in Appendix E. This memo provides information about variables not derived directly from the questionnaire, including:

- Sampling variables, such as those used in the technology and gender strata
- Weighting variables for each round of the KFS, such as nonresponse and post-stratification adjustments, as well as the longitudinal weight variable
- Survey management variables, such as the unique ID number given to cases, final dispositions, and number of contacts made to businesses
- D&B-derived variables, such as industry codes and other descriptive measures provided with the D&B file
- Constructed variables, as discussed in Section F.8
10. Preparation of Public Use Data File

In addition to the restricted-use data file we provided to the KFS data enclave, MPR produced a file for public use, available on the Foundation website [www.kauffman.org/kfs/request_download.cfm]. To create this file, we used several strategies to ensure that respondent confidentiality was not compromised. These included removing geographic variables (with the exception of “census region”), exact value variables for financial questions, and all “other–specify” variables. We reviewed the remaining variables file for values or cells containing small numbers of respondents, and “top-coded” those values into a summary statistic. QA on the public use data file was conducted by MPR staff with extensive experience in producing such files for federal agencies. Once approved, copies of the file were produced in SAS, SPSS, and STATA and provided to the Foundation, along with an annotated questionnaire and data documentation memo specifically designed for use with the public use data file.

G. WEIGHTING AND NONRESPONSE ADJUSTMENTS

1. Third Follow-Up Response Analysis Summary

For the purpose of nonresponse analysis in the Third Follow-Up alone, we classified the 4,928 panel members into two categories: located and unlocated. The located cases were further classified into “completes” and “nonrespondents.” Completes included businesses (1) for which we obtained either a web survey questionnaire or a CATI interview, or (2) that were classified as ineligible (ceased operations). Using information from the Baseline Survey, we located nearly the entire sample in the Third Follow-Up—the overall location rate (the weighted percentage of eligible businesses in the Baseline Survey that were located in the Third Follow-Up) is 96.5 percent. The weighted location and response rates relative to the Baseline Survey for the full sample are given in Table 7 and by technology stratum in tables 8 to 10.

</table>

*Completed cases include businesses with complete data for applicable questions. These include Third Follow-Up completes and ineligible businesses (primarily businesses that were not operational).*
In general, businesses in the medium-technology sampling strata responded at a slightly higher rate than did businesses in the high-technology and non-technology sampling strata. Because businesses in the non-technology sampling stratum account for the majority of the study population (85 percent), the overall location and response rates will generally reflect the pattern of the businesses in the non-technology stratum. In addition to the technology sampling strata, we analyzed the response patterns by gender, age category, education, experience in the industry of the responding owner, legal status, physical location (residence or not), and number of employees, as well as by financial information (total debt, total revenue, etc.). All these characteristics are from data collected in the Baseline Survey.  

Generally speaking, the age of the responding owner was positively correlated with response to the Third Follow-Up Survey. However, among businesses in the high-technology stratum, those whose owners were between 45 and 54 years old had a response rate slightly lower than businesses whose owners were between 35 and 44. Businesses whose responding owner had at least a bachelor’s degree responded at a higher rate in both medium-technology and non-technology strata, but at a slightly lower rate among businesses in the high-technology sampling stratum. Sole proprietorships responded at a higher rate across all strata. Overall, businesses whose revenues were between $1 and $25,000 had a higher response rate than others.

2. **Longitudinal Response Analysis Summary**

For the purpose of longitudinal nonresponse analysis in the First, Second and Third Follow-Up surveys, we classified the 4,928 panel members into two categories: completes and

---

7 For consistency with tables from the previous rounds of surveys, the characteristics shown in the response rate tables (tables 8-15) are from the data collected in the Baseline survey. In the nonresponse adjustments, the characteristics used as covariates in the SAS models are from data collected in the Baseline, First Follow-Up, and Second Follow-Up survey to take into account the dynamic features of the survey.
nonrespondents. Completes included businesses (1) for which we obtained either a web survey questionnaire or a telephone interview in all three rounds, or (2) that were classified as ineligible (ceased operations) in all three rounds, or (3) that completed an interview in the First Follow-Up and then was classified as out of business in the Second and Third Follow-Up, or (4) that completed an interview in the First and Second Follow-Up and then was classified as out of business in the Third Follow-Up. The weighted response rates for the full sample are given in Table 11 and by technology stratum in Tables 12 to 14.

In general, businesses in the medium-technology and high-technology sampling strata responded at a higher rate than did non-technology businesses. Again, because businesses in the non-technology sampling stratum account for the majority of the study population (85 percent), the overall location and response rates will generally reflect the pattern of the businesses in the non-technology stratum. As we did for the nonresponse analysis for the Third Follow-Up Survey alone, we analyzed the response patterns by gender, age category, education, experience in the industry of the responding owner, legal status, physical location (residence or not), and number of employees, as well as by financial information (total debt, total revenue, etc.). All these characteristics are from data collected in the Baseline Survey. 8

For the longitudinal response, the age of the responding owner was positively correlated with response across all three strata. Businesses whose responding owner had at least a bachelor’s degree responded at a higher rate across all technology strata, though the differential was slightly smaller among businesses in the high-technology sampling stratum than in the other two strata. Sole proprietorships responded at a higher rate across all technology strata. In

---

8 To be consistent with tables from the previous rounds of surveys, the characteristics shown in the response rate tables (Table 8-15) are from the data collected in the Baseline survey. In the nonresponse adjustments, the characteristics used as covariates in the SAS models are from data collected in the Baseline, First Follow-Up, and Second Follow-Up survey to take into account the dynamic features of the survey.

- Female: 843 (625) = 74.3%
- Male: 2,051 (1,482) = 71.9%

#### Responding Owner’s Education
- Associate’s degree or lower: 1,626 (1,138) = 69.9%
- Bachelor’s degree or higher: 1,268 (969) = 76.1%

<sup>a</sup>Completed cases include businesses with complete data for applicable questions. These included businesses (1) for which we obtained either a web survey questionnaire or a telephone interview in all three rounds, or (2) that were classified as ineligible (ceased operations) in all three rounds, or (3) that completed an interview in the First Follow-Up and then was classified as out of business in the Second and Third Follow-Up, or (4) that completed an interview in the First and Second Follow-Up and then was classified as out of business in the Third Follow-Up.
medium-technology and non-technology strata, businesses whose revenues were between $1 and $25,000 had a higher response rate than others, and the differential was smaller for businesses in the medium-technology sampling stratum than in the non-technology stratum. In the high-technology stratum, businesses having no revenue had the highest response rate, and businesses with higher revenue (over $100,000) had the lowest.

3. Sampling Weights

The initial sampling weight for the Third Follow-Up Survey is defined as the final analysis weight from the Baseline Survey, that is, the weight that includes the nonresponse adjustment and the post-stratification/raking adjustment. Table 15 shows the descriptive statistics of the initial sampling weight.

</table>

4. Nonresponse Adjustment

In essentially all surveys, the sampling weights have to be adjusted to compensate for the panel members who cannot be located or who refuse to respond. The general approach was discussed in detail in DesRoches et al. (2007). For the Third Follow-Up Survey, we applied a similar strategy: we used weighted logistic propensity modeling separately for each technology stratum. Because of the high rate of locating the businesses, we incorporated both the location and the response status of sampled businesses into the modeling. That is, we used three response
propensity logistic models (one for each technology sampling stratum). The two levels in the binary response for this model were “a located respondent” versus “nonrespondent or not located.” For the KFS, a sample member was classified as a respondent if the sample member completed the questionnaire (that is, was an eligible respondent) or was determined to be ineligible (that is, was out of business). We used the inverse of the propensity score as the response adjustment factor. The response-adjusted weight for each sample case is the product of the initial weight and the response adjustment factor. Finally, we computed a raking factor in each technology stratum to ensure that the marginal sums of the weights were the same before and after nonresponse adjustment.

We developed the models using data from the responses to the Baseline Survey and the First and Second Follow-Up within the sampling technology groups. We evaluated the data as main effects and also investigated interactions among these variables. To identify candidate variables to be used as main effects and interactions among these variables for the modeling, we first ran a CHAID analysis in SPSS to find possible significant predictors and combinations of them. To further refine the candidate variables and interaction terms, we then processed, through forward and backward stepwise regression (using the SAS logistic procedure with weights normalized to the sample size), the variables and interactions we had identified with CHAID. After identifying a smaller pool of main effects and interactions for potential inclusion in the final model, we evaluated a series of models to determine the final parsimonious model. Because the SAS logistic procedure does not incorporate the sampling design, the final selection of the covariates was accomplished with the logistic regression procedure in SUDAAN using various measures of goodness of fit and predictive ability.⁹ For selecting variables or interactions in a model, we

---
included variables or interactions that have a statistical significance level (alpha level) of 0.30 or lower (instead of the standard 0.05). We used a higher significance level because the purpose of the model was to improve the estimation of the propensity score, not to identify statistically significant factors related to response. In addition, the information sometimes reflected proxy variables for some underlying variable that was both unknown and unmeasured. The variables used as main effects and the interactions in the response model are summarized in Table 16. The value for the R-squared statistic ranged from 0.08 to 0.11 for the various final models, and the Hosmer-Lemeshow statistics ranged from 0.21 to 0.97. These values are similar to those observed for other response propensity modeling efforts using logistic regression with design-based sampling weights.

We used essentially the same approach to construct the longitudinal weights. The two levels in the binary response for this model were “longitudinal respondent” versus “longitudinal nonrespondent.” For the purpose of longitudinal weighting, a sample member was classified as a respondent if any of the following apply:

- Completed the interview in all three rounds (that is, was an eligible respondent)
- Was determined to be ineligible in all three rounds (that is, was out of business)
- Completed the questionnaire in the First Follow-Up and then was out of business for the Second and Third Follow-Up
- Completed an interview in the First and Second Follow-Up and then was classified as out of business in the Third Follow-Up

The variables used as main effects and the interactions in the longitudinal response model are summarized in Table 17. The value for the R-squared statistic ranged from 0.08 to 0.15 for the various models, and the Hosmer-Lemeshow statistics ranged from 0.54 to 0.96. These values are similar to those observed for other response propensity modeling efforts using logistic regression with design-based sampling weights.

5. **Raking**

In the final step of weighting, we applied a raking method. Raking is an iteration method and is essentially a post-stratification on a set of variables when only their marginal population distributions are known. In the previous rounds, we applied a single-level post-stratification within the three technology groups to make the sum of weights the same before and after nonresponse adjustments. In the Third Follow-Up Survey, to achieve better precision, we used raking adjustments within the six sampling strata defined by the technology group and woman ownership indicator. The set of variables for which we controlled for marginal totals include the four-level census division, the two-level MSA indicator, and the two-level industry (service industry or not). Collapsing might be needed within each individual variable to make sure there were enough cases within each cell. The raking adjustment factor ranged between 0.95 and 1.06 for the Third Follow-Up weights, and between 0.90 and 1.08 for the longitudinal weights.

**H. ESTIMATION**

1. **Point Estimation**

The KFS uses a simple stratified sampling design. As described in DesRoches et al. (2007), the businesses in the high-technology sampling stratum were oversampled substantially (actually all were included in the sample). We also oversampled the medium-technology businesses relative to the non-technology ones. The sampling weights take this oversampling into account to remove the potential bias in the estimates relative to unweighted estimates. Moreover, as shown in Section G, the response rate differed by factors like legal status, ownership, and age and education of the owner. The nonresponse adjustments described in Section G were designed to minimize potential nonresponse bias in the estimates. We strongly recommend the use of the nonresponse-adjusted weights for all estimates using the KFS data.
2. Variance and Interval Estimation

Variance estimates calculated from KFS data must incorporate the sample design features to obtain the correct (approximately unbiased) estimates. Most procedures in standard statistical packages such as SAS, STATA, and SPSS are not appropriate for the proposed design, because the assumptions in these software packages or procedures are for independent, identically distributed observations or for simple random sampling with replacement.\(^{10}\) Although the simple random sample variance may approximate the true sampling variance for some surveys, it is likely to underestimate substantially the sampling variance with the KFS design.

The sampling variance is a measure of the variation of an estimator attributable to having sampled a portion of the full population of interest using a specific probability-based sampling design. The sampling variance is a measure of the variation of the estimate of a population parameter (for example, a population mean or proportion) over repeated samples, whereas the classic “population” variance is a measure of the variation among the observations in the population. The population variance is different from the sampling variance in the sense that the population variance is a constant, independent of any sampling issues, while the sampling variance becomes smaller as the sample size increases. The sampling variance is zero when the full population is observed, as in a census.

For the KFS, the sampling variance estimate is a function of the sampling design and the population parameter being estimated. Called the design-based sampling variance, it assumes the use of fully adjusted sampling weights, which are derived from the sampling design, with adjustments to compensate for nonresponse among the businesses and additional adjustments to align the sampling totals to external totals, as previously described. We developed a single fully

\(^{10}\) STATA and SAS software packages now contain procedures that account for the sampling design and can be used for estimation of the sampling variances.
adjusted sampling weight and information on analysis parameters (that is, analysis stratification) necessary for the estimation of the sampling variance for a statistic using the Taylor series linearization approach. The fully adjusted sampling weight and the analysis parameters can be used in survey data analysis procedures in SUDAAN or in certain procedures in STATA, SAS, and SPSS to compute design-unbiased variance estimates. These variance estimates can be used to make interval estimates. For example, for a proportion ($p$) of businesses (or owners) with certain characteristics, the 90 percent confidence interval is

$$\left[ p - 1.645 \times (\text{std err.} \ (p)), \ p + 1.645 \times (\text{std err.} \ (p)) \right]$$

To identify sampling levels or stages, the SUDAAN software requires specifying the survey design and STRATA variables. This is the stratum variable we used when drawing the sample (that is, the six-level variable defined by technology group and woman-owned status).

3. **Selected Estimates and Variances**

The point and variance estimation procedures are straightforward, and we provide example estimates at the business level and the owner level here. These estimates are for the following variables (the question number and response categories are in parentheses).

**Business level:**

- Percentage of businesses that are sole proprietorships ($C1z2 = 1$)
- Percentage of businesses that are partnerships ($C1z2 = 5, 6$)
- Percentage of businesses whose primary location is a residence such as a home or garage ($C8 = 1$)
- Percentage of businesses that have any patents, copyrights, or trademarks (any $D3 = 1$)
- Percentage of businesses that have R&D expenditures ($F19 = 1$)

**Owner level:**

- Percentage of responding owners who are 25-44 ($G4 = 2, 3$)
- Percentage of responding owners with higher than bachelor’s degree (G9 = 7, 8, 9, 10)
- Percentage of responding owners who work full-time (G1b1 = 3, 4, 5, 6)
- Percentage of responding owners who are women (G10 = 2)

Table 18 shows these estimates and their standard errors (the square root of the variance).

APPENDIX A

KFS THIRD FOLLOW-UP QUESTIONNAIRE PROPOSED CHANGES
I. INTRODUCTION

The Kauffman Firm Survey (KFS) plans a Third Follow-Up Survey in 2008. As part of the Kauffman Foundation’s outreach to data users, a request for proposals was issued in October 2007 for new questions to be added to the KFS questionnaire. Four sets of questions were submitted, totaling 34 questions. Given the length of the Second Follow-Up Survey questionnaire (33 minutes on average by telephone), it will be necessary to prioritize the proposed questions so as to limit the increase in respondent burden and any corresponding reduction in the survey response rate. In evaluating the suggested questions, MPR considered their relevance to the KFS panel, the likely effect of adding the question on respondent burden and, and the potential issues involved in administering the question. This memo details the questions submitted, along with comments from MPR staff on the KFS project team.

II. PROPOSED QUESTIONS FROM THE NATIONAL SCIENCE FOUNDATION

A. Follow-up to C8 (Business Location)

C8a. Next, I’m going to ask you whether you chose this location to be close to several types of organizations. The first one is [READ FIRST ITEM]. Did you chose this location to be close to [or in] a [REPEAT FIRST ITEM]. The next one is [READ NEXT ITEM]? [As necessary:] Did you chose this location to be close to [or in] a [REPEAT ITEM].

<table>
<thead>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Read descriptions as needed:

**Science parks, also called research parks,** are real estate developments designed to promote technology development. Many science parks are affiliated with universities or government agencies.

**Business incubator centers** are facilities to help startup companies grow through the use of business services and other shared resources. Business incubators can be located in science and research parks.

**Technology corridors** are loosely-defined geographic areas with clusters of technology-oriented companies. They are typically located near a population center or a major highway or airport.

**Universities and colleges** include branch campuses, research centers, and any other location of an academic institution.

**MPR comments:**

1. This question is most appropriate for businesses that are primarily operated from a non-residential setting. We are concerned that the proximity of home-based businesses to these types of locations will not be meaningful for analysis, and we recommend that home-based businesses be skipped over this question.

2. We are somewhat concerned that businesses may be chosen to locate near a “university or college” for reasons that have nothing to do with innovation, especially among KFS non-tech businesses. We would recommend looking at the data collected at a question like this be used in conjunction with data on primary industry. As an alternative, this question could only be asked of high-tech and medium-tech businesses.

3. In addition to the question on primary location asked in the Baseline Survey, the follow-up surveys have also included questions about the reason for changes in primary location and the number of locations the business has. We recommend that if this question is added to the KFS, that it be placed after the question about the reason for changes in the primary location (currently question C9), and before the question about additional locations (currently question C10).

4. In terms of the question wording, we would recommend an opening statement that is clearly tied to the primary location, and expanding the description of the list, since some of the items on the list are not organizations per se. An example is:

   “Now, focusing on your current primary location of [READ C8 RESPONSE], I’m going to ask you whether you chose this location to be close to several types of several types of organizations or areas.”
B. Follow-up to D2 (Competitive advantage)

(If respondent answers “YES” in D2.)

D2a. I’m going to ask you about several items that could have contributed to your company’s competitive advantage both in calendar year 2007 and in 2004 when you started your company. For each one I read, please tell me if it is a major reason, a minor reason, or not a reason for your competitive advantage in 2007. After that, I will ask you if this is something about your company that was the same or different in 2004. If an item does not seem to apply to you, you can say that it is not a reason. The first one is [READ FIRST ITEM].

[As necessary:] Would you say that is a is a major reason, a minor reason, or not a reason for your competitive advantage in 2007? Is that the same situation or different from 2004? If “different,” ask: In 2004 was it a major reason, a minor reason, or not a reason for your company’s competitive advantage.

The next item is [READ NEXT ITEM]. [As necessary:] Would you say that is a major reason, a minor reason, or not a reason for your competitive advantage in 2007? Is that the same situation or different from 2004? If “different,” ask: In 2004 was that a major reason, a minor reason, or not a reason for your company’s competitive advantage?

</tbody>
</table>

**MPR comments:**

1. The first sentence assumes that the competitive advantage was static between 2004 and 2007 (meaning the business had an advantage at both points in time), which is not necessarily true and may confuse respondents. The KFS has consistently taken the approach of reducing respondent recall problems by concentrating on the previous calendar year during each survey round. For this reason, we strongly recommend asking this set of questions of calendar year 2007 only.
2. Given that these questions are likely to be most relevant to high-tech businesses, we recommend screening questions so that non-tech businesses do not have to answer the entire list. For example, the following two questions could be asked of all respondents reporting a competitive advantage at D2:

   a. Is the competitive advantage you have related in any way to teaming up with a college or university, a government research center, or another company?

   b. Is the competitive advantage that you have related in any way to patents you own, have applied for, or licensed, or to unpatented science and technology that you own?

   If “No” to both questions, they would skip the grid, and if “Yes” to both, they would answer the whole set of questions. If “Yes” to one and “No” to the other, they would only be asked the questions related the “Yes” answer. We believe this would strike a balance between gathering useful information and increasing respondent burden.

C. Follow-up to F19 (Research and Development spending)

IF BUSINESS REPORTED “0” spending at F19, GO TO F20.

F19a. Could you please estimate how much your company spent on R&D in 2007 including salaries, wages, and benefits?

   $__________.

   [if volunteered:]  None
                      Don’t know
                      Refused

IF DON’T KNOW OR REFUSED, PROBE: You don’t have to give me an exact figure; your best estimate will do.

MPR comments:

1. Prior to the Baseline Survey, we piloted questions on the total amount the business spent on R&D, but the question was dropped from the Baseline Survey due to the difficulty of respondent being able to provide an accurate figure. This may be less of a problem with more established businesses and asking this only of those who reported some spending.

2. We assume this question is trying to capture a total expenditure figure for R&D, not just salaries, wages, and benefits. If so, we should include other expenses that should be included (such as materials, equipment, space, etc.) or risk having some respondents include only the items mentioned in the current question.
3. For Don’t Know, Refused, or Blank responses, we recommend using the standard KFS ranges used for other financial questions in the survey.

F19b. Of your R&D spending in 2007 [As necessary: READ TOTAL AMOUNT], could you please estimate the percent of the total, if any, that was used for projects that have a biotechnology application?

________ percent

[if volunteered:] None
Don’t know
Refused

IF DON’T KNOW OR REFUSED, PROBE: You don’t have to give me an exact figure; your best estimate will do.

[As needed:] Biotechnology is the use of science and engineering for the study of living organisms.

F19c. Of your R&D spending in 2007 [As necessary: READ TOTAL AMOUNT], could you please estimate the percent of the total, if any, that was used for projects that use materials synthesis and processing?

________ percent

[if volunteered:] None
Don’t know
Refused

IF DON’T KNOW OR REFUSED, PROBE: You don’t have to give me an exact figure; your best estimate will do.

IF RESPONDENT ASKS WHETHER TO INCLUDE WHAT THEY ALREADY REPORTED IN F19b, THE ANSWER IS “YES.”

[As needed:] Materials synthesis and processing is the use of science and engineering to form and manipulate new materials.
MEMO TO: E. J. Reedy  
FROM: David DesRoches  
DATE: 2/4/2008  
PAGE: 6

F19d. Of your R&D spending in 2007 [As necessary: READ TOTAL AMOUNT], could you please estimate the percent of the total, if any, that was used for software projects.

________ percent

[if volunteered:] None  
Don’t know  
Refused

IF DON’T KNOW OR REFUSED, PROBE: You don’t have to give me an exact figure; your best estimate will do.

IF RESPONDENT ASKS WHETHER TO INCLUDE WHAT THEY ALREADY REPORTED IN F19b OR F19c, THE ANSWER IS ―YES.‖

[As needed:] Software is the programs, applications, routines, and so forth, for computers, excluding those used exclusively for company operations.

MPR comment:
1. The question and optional probe at F19d should be more explicit about including software developed for products and services, and excluding software for internal use only.

2. We should consider a screening question that asks if any of the R&D was for biotechnology, materials, or software, in turn. If the answer is “Yes” to one or more than one, we could follow up with questions about each of those. This would reduce respondent burden.

F19e. Of your R&D spending in 2007 [As necessary: READ TOTAL AMOUNT], did you obtain any of that though a federal government research program such as the Small Business Innovation Research program — SBIR, the Advanced Technology Program — ATP, or any another federal research program?

Yes  
No  
Don’t know  
Refused

IF F19e is No, Don’t know, OR Refused, GO TO F20.
F19e1. Could you give me the names of the federal government research programs that helped you?

Small Business Innovation Research (SBIR) program
Advanced Technology Program (ATP)
Other (Specify answers)

**MPR comment:**

1. It is not clear whether the list of programs at F19e1 is read to the respondent or not. We recommend that each item in the list be read with a “Yes/No” option for response.

2. Prior to the Baseline Survey, we piloted questions on participation of businesses in SBIR, HUBZone, and 8(a) business development certification. These question was dropped from the Baseline Survey due to the low level of participation reported by respondents. We are concerned that incidence will not have increased appreciably among KFS businesses, so that the questions may not produce sufficient businesses participating in these programs for analysis.

**D. Follow-up to F20 (Purchase of new or used machinery or equipment)**

IF BUSINESS REPORTED “0” PURCHASES AT F20, GO TO F21.

F20a. Could you please estimate how much your company spent on these purchases?

$__________

[if volunteered:] None
Don’t know
Refused

IF DON’T KNOW OR REFUSED, PROBE: You don’t have to give me an exact figure; your best estimate will do.

**MPR comments:**

1. Prior to the Baseline Survey, we piloted questions on the total amount the business spent on new or used machinery or equipment, but the question was dropped from the Baseline Survey due to the difficulty of respondent being able to provide an accurate figure. This may be less of a problem with more established businesses and only asking this of those who reported some spending.

2. For Don’t Know, Refused, or Blank responses, we recommend using the standard KFS ranges used for other financial questions in the survey.
E. Follow-up to G9 (Highest level of education)

   IF EDUCATION IS 01 TO 05, GO TO G10.
   IF EDUCATION IS 08, GO TO G9b.
   G9a. What was the primary field of study for that degree?

   IF EDUCATION IS 06, 07, 09, 10, GO TO G10.
   G9b. What was the primary field of study for [your/the OWNER’S] bachelor’s degree?

**MPR comments:**

1. During the development of the KFS questionnaire, we were sensitive to the need to include demographic questions that one owner-operator (as respondent) could answer accurately for all other owner-operators in the business. The result of this effort has been very low item nonresponse among the demographic questions. We feel these questions will have above average item nonresponse due to some owner-operators not knowing the field of study for other owner-operators.

2. For the follow-up surveys, we have been asking the education question about owner-operators only if they were new to the business (and we therefore needed to ask the entire demographic battery), or if we were unable to collect this information during previous rounds of the survey (due to refusal). These follow-up questions would require the education question to be asked of all owner-operators during the Third Follow-Up.

3. Adding these questions will also increase the amount of coding effort required for the survey. We estimate that over 2,500 text string verbatim responses will be collected through the addition of these questions. We would need to know the most appropriate taxonomy to code these verbatim to (CIP, SESTAT), and the level of specificity required.
III. PROPOSED QUESTIONS FROM DR. CHARLES BRAYMAN (KANSAS STATE UNIVERSITY)

QUESTION 1:

A domestic business is a business based in the United States. A foreign business is a business based in foreign country. The primary competitors of [NAME BUSINESS] in calendar year 2007 were:

- DOMESTIC BUSINESSES
- FOREIGN BUSINESSES
- BOTH FOREIGN AND DOMESTIC BUSINESSES
- DON’T KNOW
- REFUSED

QUESTION DELIVERY: Computer-Assisted Telephone and Web-based Survey
QUESTION TESTED: No
PROPOSED LOCATION IN SURVEY: After Question D3 or Globalization Module
SPECIFIC POPULATION: All Respondents

MPR comment:
1. This question, if added to the KFS, would probably be best placed after D2, which asks about competitive advantage.

QUESTION 2:

What percentage of the sales of [NAME BUSINESS] was to foreign parties in calendar year 2007?

[___ | ___ | ___] PERCENTAGE

DON’T KNOW
REFUSED
QUESTION DELIVERY: Computer-Assisted Telephone and Web-based Survey
QUESTION TESTED: No
PROPOSED LOCATION IN SURVEY: After Question D7 or Globalization Module
SPECIFIC POPULATION: Respondents with YES for D6
MEMO TO: E. J. Reedy  
FROM: David DesRoches  
DATE: 2/4/2008  
PAGE: 10

**MPR comments:**

1. The current question refers to foreign “parties,” which may be a confusing term for respondents. We suggest using the same terms used in question D7 and identifying those as being outside the U.S. For example, the question could be revised to:

   “Some businesses make sales to individuals, businesses, or governments outside the United States. In calendar year 2007, what percentage of [NAME BUSINESS]’s sales were to individuals, businesses, or governments located outside the United States?”

2. We expect the percentage of businesses in the KFS sample that export will be fairly low. Another approach to this question is to employ a screening question to determine if any of the business’ sales were of an export nature, and ask the percentage question only of those who indicate the business had export sales.

**QUESTION 3:**

Which of the following have prevented or restricted foreign sales?

(_RESPONDENT MAY CHOOSE MORE THAN ONE)_

- LIMITED KNOWLEDGE OF FOREIGN MARKET CONDITIONS
- COST OF ESTABLISHING A FOREIGN MARKET
- UNITED STATES EXPORT RESTRICTIONS
- TARIFFS, QUOTAS, AND OTHER REGULATIONS OF FOREIGN COUNTRIES
- DON’T KNOW
- REFUSED

**QUESTION DELIVERY:** Computer-Assisted Telephone and Web-based Survey  
**QUESTION TESTED:** No  
**PROPOSED LOCATION IN SURVEY:** After Proposed Question 2  
**SPECIFIC POPULATION:** Respondents with YES for D6

**MPR comments:**

1. For this question, it will be important to establish that businesses reporting no foreign sales actually attempted to make such sales. Those respondents whose businesses never considered foreign markets will have a hard time answering this question. A screener question would identify those businesses who reported no foreign sales but had tried to make them. The proposed question could then be asked of this group.

2. The use of the word “restricted” suggests that those businesses with limited foreign sales could be asked this question. We would suggest limiting the question to only those businesses that tried and failed to establish foreign sales, since defining a benchmark
percentage as limited seems arbitrary (for example, businesses may be satisfied or at capacity making a small percentage of sales to foreign parties).

3. We would suggest an “Other-Specify” response option be added to the question.

QUESTION 4:

Which type of party did [NAME BUSINESS] license out [ITEMS ANSWERED YES IN D4] in calendar year 2007?

<table>

QUESTION DELIVERY: Computer-Assisted Telephone and Web-based Survey
QUESTION TESTED: No
PROPOSED LOCATION IN SURVEY: After Question D5 or Globalization Module
SPECIFIC POPULATION: Respondents with YES for any part of D5
RATIONALE AND BACKGROUND:
MEMO TO: E. J. Reedy
FROM: David DesRoches
DATE: 2/4/2008
PAGE: 12

**MPR comment:**
1. We suggest rewording these questions so they use similar terminology to that suggested above at Question 2. Although these questions are unlikely to increase respondent burden for most respondents since few will qualify to be asked them, the small portion of the sample answering them are likely to be the most valuable in terms of growth potential. We are concerned about increasing respondent burden among this group.

QUESTION 6:

Did [NAME BUSINESS] purchase equipment or materials from foreign parties during calendar year 2007?

- YES → GO TO QUESTION 7
- NO → END SECTION
- DON’T KNOW
- REFUSED

**QUESTION DELIVERY:** Computer-Assisted Telephone and Web-based Survey
**QUESTION TESTED:** No
**PROPOSED LOCATION IN SURVEY:** After Question F17 or Globalization Module
**SPECIFIC POPULATION:** All Respondents

**MPR comment:**
1. For this question it will be important to distinguish between importing equipment or materials from outside the U.S. versus purchasing goods from a foreign company located in the U.S. Rather than use the phrase “foreign parties,” we recommend asking whether they purchased equipment or materials from outside the U.S.

QUESTION 7:

Which of the following contributed to the decision to purchase equipment or materials from foreign sources during calendar year 2007?

- FOREIGN SOURCES HAD A LOWER PRICE
- GOOD NOT PRODUCED BY SOURCES IN THE UNITED STATES
- DON’T KNOW
- REFUSED

**QUESTION DELIVERY:** Computer-Assisted Telephone and Web-based Survey
**QUESTION TESTED:** No
MEMO TO:  E. J. Reedy  
FROM:  David DesRoches  
DATE:  2/4/2008  
PAGE:  13

PROPOSED LOCATION IN SURVEY: After Proposed Question 6 or Globalization Module  
SPECIFIC POPULATION: Respondents with YES for Proposed Question 6  

**MPR comments:**  
1. We assume that respondents can select multiple responses to this question.  
2. We recommend including a “foreign sources had higher quality” response option.  
3. We recommend including an “Other-Specify” response option.  

**IV. PROPOSED QUESTIONS FROM DR. ALICIA ROBB (UNIVERSITY OF CALIFORNIA – SANTA CRUZ)**  
These would be placed after F14.

**READ:** This next section is about recent applications for credit. I want you to include renewals of, and new applications for, lines of credit and other types of loans. Do not include applications for credit cards, loans from owners, or trade credit with suppliers. Also, do not include applications that were withdrawn or that are still pending.

How many times in the *last three years* did the firm apply for new loans?  

NUMBER:____________________________________  
DK/RF...........................................................................  

**MPR comments:**  
1. Prior to the KFS Baseline Survey, we piloted similar questions on applications for financing and denials. These were removed from the Baseline Survey questionnaire after review of the pilot data, with the reasoning that denial of applications represented very different outcomes according to industry, which affected the usefulness of the data collected.  
2. The use of a three-year time frame would differ from all other time references in the questionnaire. The KFS has consistently taken the approach of reducing respondent recall problems by concentrating on the previous calendar year during each survey round. For this reason, we recommend asking this set of questions of calendar year 2007 only. Also, is the current question asking about three calendar years, or three years from the date of the Third Follow-Up interview?  
3. We are assuming that respondents reporting zero credit applications will skip out the rest of these questions.
Were these loan applications always approved, always denied, or sometimes approved and sometimes denied?

ALWAYS APPROVED ........................................1
ALWAYS DENIED ...........................................2
SOMETIMES APPROVED/SOMETIMES DENIED ........3
DK/RF..................................................................DK/RF

IF ANY DENIALS: (Otherwise skip to last 2 questions)

For your most recent denial, what official reasons did the funder give for denying the firm’s application?

___________________________________________________

Do you think there were any other reasons that the application was turned down?

YES ........................................................................1
NO ...........................................................................2
DK or RF .................................................................. DK or RF

What were they? ______________________________________

During the last three years, were there times when [FIRM] needed credit, but did not apply because it thought the application would be turned down?

IF R ASKS ABOUT CANCELLED APPLICATIONS, SAY: Include applications that were withdrawn because the firm suspected it would be turned down.

YES ........................................................................1
NO ...........................................................................2
DK or RF .................................................................. DK or RF

Why did you think the firm would have been turned down?

___________________________________________________
MEMO TO:  E. J. Reedy  
FROM:  David DesRoches  
DATE:  2/4/2008  
PAGE:  15  

**CODEFRAME FOR**  
/* Terms of loan sought */  
11 = Insufficient collateral or no guarantee available  
47 = Tax Lien, Judgments  
98 = Not ascertainable  
12 = Loan too large (personal or business lawsuits) .D=Don’t know  
13 = Loan too small /* Miscellaneous */ .R=Refuse  
14 = Size of loan (small vs. large n.a.)  
51 = Inability to audit account .S=Legitimate skip  
/* Type of loan */  
52 = Insufficient time to process application  
21 = Loan would overconcentrate inst. Portfolio  
22 = Institution doesn’t like to make loans of this type  
/* General reasons */  
30 = Credit history, not otherwise specified /* Institutional error or prejudice*/  
31 = Business credit history  
32 = Personal credit history  
33 = Poor balance sheet, financial situation  
34 = Firm would fail institution’s formula or guidelines  
35 = Ability to renew/repay questionable  
36 = Firm not in business long enough /* Other reasons to anticipate turndown */  
37 = Characteristics of firm /* 72 = Banks don’t loan to (small) business  
41 = Firm too small for institution, too few assets (includes self-employed or no employees)  
42 = Large amount of outstanding loans, overextended /* Problem responses */  
43 = Firm too highly leveraged, too little equity  
45 = Firm in declining or risky industry  
46 = Bad fit between institution and firm  
47 = No particular reason  
94=Same as previous  
95=No particular reason  
97=Other  

**MPR comments:**  
1. We are concerned that respondents will not recall specifically the “official” reasons the funder provided in the first question, especially if the most recent denial was some time ago.  
2. For the second question, we would clearly be collecting the respondent’s perceptions or expectations of why they were denied. The KFS has tried to avoid including perception questions, since the respondent may vary from one survey round to another—making comparison across rounds less meaningful.  
3. The code frame provided would not be able to be displayed for the web survey, which would mean collecting verbatim responses for these two questions and coding them after collection. This will increase the amount of coding effort required for the survey.  

In terms of getting access to credit, how do you think 2007 compared with 2005 & 2006?  

More Difficult ..........................................................1  
Less Difficult..........................................................2  
The Same ..............................................................3  
DK or RF ...............................................................DK or RF
MEMO TO: E. J. Reedy  
FROM: David DesRoches  
DATE: 2/4/2008  
PAGE: 16

**MPR comment:**

1. This is another perception question (see above). Also, because the time frame for the first question is three years, we cannot be sure that the business sought credit during both 2007 and 2005-2006.

   Did your business experience any negative effects from the subprime lending market meltdown (crisis)?

   YES .................................................................1
   NO ......................................................................2
   DK or RF............................................................DK or RF

**MPR comment:**

1. This is another perception question (see above).

V. **PROPOSED QUESTIONS FROM DRS. PURI AND ROBINSON (DUKE UNIVERSITY)**

   We propose adding two questions to the end of Section D that would branch off an affirmative response to Question D7.b. If the respondent firm answers “Yes” to D7.b, we would ask:

   D8: Do you have other business relationships with any of these firms?

   _____ Yes ______ No

   D9: (If D8==Yes) What type of business relationships are these? (check all that apply)

   _____ Strategic Alliance
   _____ Joint Venture
   _____ Co-Marketing Agreement
   _____ Co-Distribution Agreement
   _____ R&D Alliance
   _____ Subsidiary

**MPR comment:**

1. We would suggest defining the “relationships” referred to in the question by including examples such as “joint ventures or distribution agreements.”
We also propose a series of questions to appear immediately after Question F.6 in the business finances section. If Question F.3D is answered “Yes”, then we would branch to the following questions after F.6:

New F7: Do you have any other business relationships with this firm?

_____Yes ______No

New F8: (If F8==Yes) What type of business relationships are these? (check all that apply)

_____Strategic Alliance
_____Joint Venture
_____Co-Marketing Agreement
_____Co-Distribution Agreement
_____R&D Alliance
_____Subsidiary

**MPR comments:**

1. We would suggest defining the “relationships” referred to in the question by including examples such as “joint ventures or distribution agreements.”

2. The proposal references asking these questions of all listed owners at F6 “in a Likert format.” Is the intent here that one respondent for the business be asked whether each of the owners (owner-operators and non-operating equity holders in the business) have a relationship with the business(es) referred to in F.3d? If so, we feel this would be problematic, since non-operating owners in F.3 can represent multiple individuals such as spouses, family members, and angels. Our recommendation would be to concentrate on the relationships between the sampled business and the business(es) that own a share of the sampled business (at F.3d) only.
APPENDIX B
KAUFFMAN FIRM SURVEY
THIRD FOLLOW-UP QUESTIONNAIRE
Kauffman Firm Survey
Third Follow-Up

Final Questionnaire

May 15, 2008
A. INTRODUCTION

INTRO: Hello, my name is ______________. I’m calling on behalf of the Kauffman Foundation.

May I speak with (OWNER NAME/the owner or CEO of [NAME BUSINESS])?

OWNER NAME = Second Follow-Up Respondent for Section A.

OWNER NAME —PROCEED WITH INTERVIEW ........ 01
OWNER NAME —BAD TIME/CALL BACK ..................... 02 ➔ GO TO A2a
OWNER NAME NOT AVAILABLE ................................. 03 ➔ GO TO Inform
OWNER NAME NO LONGER WITH BUSINESS .......... 04 ➔ GO TO A1a [then A4web if A1a=1]

BUSINESS NO LONGER IN OPERATION ................ 05 ➔ GO TO A10
DON’T KNOW .................................................. d ➔ THANK AND TERMINATE
REFUSED .......................................................... r

A1a. Your business has been participating in the Kauffman Firm Survey. Last year we asked you some questions about [NAME BUSINESS]’s operations in 2006. Now we’d like to ask about calendar year 2007.

We’d like to confirm that the name of the business is [NAME BUSINESS] and that [NAME BUSINESS] is still operating.

[NAME BUSINESS] IS THE CURRENT NAME AND [NAME BUSINESS] IS STILL OPERATING........ 01
THE BUSINESS NAME IS INCORRECT ...................... 02 ➔ GO TO A2Web
[NAME BUSINESS] IS OUT OF BUSINESS ................. 03 ➔ GO TO A10

A1b. We’d like to confirm that you are [OWNER NAME] and you are still an owner of [NAME BUSINESS]?

[OWNER NAME] IS THE RESPONDENT AND IS STILL AN OWNER OF [NAME BUSINESS] ............... 01

[OWNER NAME] IS THE RESPONDENT AND IS STILL AN OWNER OF [NAME BUSINESS], BUT CORRECT [OWNER NAME]’s NAME ...................... 02 ➔ GO TO A4aWeb

RESPONDENT IS NOT [OWNER NAME] ...................... 03 ➔ GO TO A4Webz
THE RESPONDENT [OWNER NAME] IS NO LONGER AN OWNER OF [NAME BUSINESS] ........... 07 ➔ GO TO A5a Box
A1c. We’d like to confirm that the title of your position is [TITLE]? Is that correct?

YES .................................................................................................................. 01 → GO TO A5
NO .................................................................................................................... 00
DON’T KNOW .................................................................................................. d → GO TO A5
REFUSED ........................................................................................................... r

A1d. What is your job title?

INTERVIEWER: ENTER JOB TITLE.

__________________________________________________ UPDATE TITLE

GO TO A5

A2a. I’m sorry. When would be a better time to reach (you/[OWNER])?

INTERVIEWER: ENTER CALLBACK DATE AND TIME.

READ: Is this the best number to reach you?

INTERVIEWER: UPDATE CONTACT INFORMATION AS NEEDED.

Thank you very much. Good-bye.

THANK AND TERMINATE

A2Web. What is the correct business name?

INTERVIEWER: TYPE IN BUSINESS NAME.

A3Web. Is this a corrected spelling, a name change but the same business, or a different business?

SPELLING CORRECTION ............................................ 01 → GO TO A1b
NAME CHANGE/SAME COMPANY ..........02 → GO TO A1b
DIFFERENT COMPANY ..............................03
A3Webz. We are trying to find out what happened to [NAME BUSINESS]. Is [NAME BUSINESS] still in operation?

YES ................................................................. 01 → GO TO A1b
NO ................................................................. 00 → GO TO A10
DON'T KNOW .................................................... d
REFUSED ........................................................... r → THANK AND TERMINATE

A4Webz Is [OWNER NAME] still an owner and actively involved in running [NAME BUSINESS]?

IF NEEDED:  By actively involved, we mean providing regular assistance or advice with day-to-day operations of the business rather than providing only money or occasional operating assistance.

YES ................................................................. 01
NO ................................................................. 00 → GO TO A5a Box
DON'T KNOW .................................................... d

- YES .................................................. 01
- NO .................................................. 00
- DON'T KNOW .................................... d
- REFUSED ......................................... r

THANK AND TERMINATE
NO SECTION B
C. BUSINESS CHARACTERISTICS

All of the following questions I’m going to ask are about [NAME BUSINESS]. Some of the questions will ask to confirm information about your business which you provided to us previously. As we go through the interview, please tell me if any of the information about your business is incorrect and needs to be updated.

C1z. Our records show that [NAME BUSINESS] had a legal status of [OWNERshipModel]. As of December 31, 2007, is that still the legal status of [NAME BUSINESS]?

YES..................................................................................01 ➔ GO TO C1a
NO ....................................................................................00
DON'T KNOW .......................................................................d
REFUSED ..............................................................................r
I’m going to read you a list of some different forms of legal status a business can have. As of December 31, 2007, which form of legal status did [NAME BUSINESS] have? Was it a . . .

**READ LIST AND READ DESCRIPTIONS AS NEEDED:**

**Sole Proprietorship:** A type of business ownership in which a business is owned and managed by one individual and no subchapter S-corporation or C-corporation has been established.

**Limited Liability Company:** A cross between a corporation and a partnership, and offering some of the benefits of both. Similar to S corporations, income produced by a limited liability company flows through to owners (known as “members”) who pay their own taxes as individuals. Unlike S-corporations, however, limited liability companies are not subject to as many government restrictions.

**Subchapter S-Corporation:** Corporations in which all profits and losses are passed through to shareholders, just as they are passed through to partners in a partnership.

**C-Corporation:** Legal entities separate from their owners that may engage in business, make contracts, own property, pay taxes, and sue and be sued by others.

**General Partnership:** An association of two or more people who co-own a business for the purpose of making a profit and no subchapter S-corporation or C-corporation has been established.

**Limited Partnership:** A partnership in which one or more partners are general partners who manage the business and others are limited partners who invest in the business but forego any right to manage the company.

D3. Whether assigned by an owner or obtained in some other way, does [NAME BUSINESS] have any of the following? (READ LIST)

FOR EACH “YES,” ASK: How many (READ ITEM) does [NAME BUSINESS] have?

INTERVIEWERS IF NEEDED:

**Patent:** A patent is a right given by the government to preclude others from making and selling an invention for 20 years from the date of application in return for disclosure of how the invention operates.

**Copyright:** The legal right granted to authors, composers, artists and publishers to protect their thoughts and ideas for exclusive publication, reproduction, sale and distribution of their works.

**Trademark:** Words, names, symbols or devices, or any combination of these used to identify the goods of a business and to distinguish these goods from the goods of others.

Now I'd like to ask about [NAME BUSINESS]'s financing. Businesses can get money from the savings or investments of the owner(s), money from spouses, family or other individuals, from companies, borrowing in an owner’s name, venture funds, or by borrowing in the name of the business. Some of the funds must be paid back and other funds represent an equity stake or share of the business. We will ask some questions about what happened during calendar year 2007, some questions about what has happened since the business began, and other questions about balances as of December 31, 2007.

First, in calendar year 2007, did [you/OWNER B-J] put any of your own money into [NAME BUSINESS] in return for an ownership share of the business? Please do not include any money borrowed from others or from credit cards.

**IF NEEDED:** This would include all additional money invested by [you/OWNER B-J] in the business during calendar year 2007.

YES .................................................................................................................... 01
NO .................................................................................................................... 00
DON’T KNOW ................................................................................................. d
REFUSED ........................................................................................................... r

GO TO F2a1
F2a. **IF YES:** How much of [your/her/his] own money did [you/she/he] put into the business during calendar year 2007?

**IF NEEDED:** Your best estimate is fine.

OWNER A........................................... $ |___|___|___|___|___|___|___|___
DON'T KNOW.................................................. d
REFUSED.......................................................... r

F7a. Another way to finance a business is debt financing. Debt is money borrowed that has to be paid back with or without interest.

We will be talking about categories of debt based on who is responsible for paying it back. For each category, I’ll ask you about several sources of debt business owners or businesses can use to fund operations. We want to make sure that any business-related debt is reported in the right category, and is reported only once. I will identify each category and remind you when I change categories. Here is the first category.

I’m going to ask you about some different types of debt financing you may have borrowed in your name on behalf of [NAME BUSINESS]. For each, please tell me if you used this type at any time during calendar year 2007. Did you use [NAME FINANCING OPTION FROM LIST]?

F7b. IN BELOW LIST, FOR EACH DEBT FINANCING OPTION BUSINESS REPORTED, ASK: How many [NAME DEBT FINANCING OPTION] did you use to finance the operation of the business during calendar year 2007?

APPENDIX C

RESPONDENT MATERIALS
Subject: Round 4 -- Kauffman Firm Survey

Dear [THIRD FOLLOW-UP RESPONDENT NAME]:

Welcome to the 4th round of the Kauffman Firm Survey (KFS)! Sponsored by the Ewing Marion Kauffman Foundation, KFS is a groundbreaking study investigating how new businesses like yours develop and operate in their early years of existence. [BUSINESS NAME] is one of only 4,500 businesses participating in this, the largest longitudinal study of new businesses ever performed. Your continued participation is critical. Already, your input from previous rounds has helped provide important insights. Highlights include:

- Nearly 45% percent of businesses reported making a profit in their first year of operations, and about 17% had profits greater than $100,000.
- One quarter of businesses had at least 2 employees.
- Most of the equity raised by businesses came from the owners themselves.
- 30% of businesses in the study were owned by women.

For additional findings from the first three rounds, check out: http://www.kauffman.org/kfs/

You can complete the 4th round of this important study online at www.kauffmansurvey.org using the following login ID and Password:

    Login ID:  «username»
    Password:  «password»

In appreciation, you will again receive $50. All information you provide will be kept confidential, and no information will be released that can be linked to you or your business. If you have questions, please call Pat Jones toll free at 877-542-6725, or me directly at 609-750-2018. You may also email the study team at KFS@mathematica-mpr.com.

Thank you in advance for your continuing participation.

Sincerely,

Betsy Santos
Survey Director

Dear «CEO_Prefix» «LastName»:

Welcome to the fourth round of the Kauffman Firm Survey (KFS)! Sponsored by the Ewing Marion Kauffman Foundation, KFS is a groundbreaking study investigating how new businesses like yours develop and operate in their early years of existence. «BusinessName» is one of only 4,500 businesses participating in this, the largest longitudinal study of new businesses ever performed. Already, your input from previous rounds has helped provide important insights. Highlights include:

- Nearly 45 percent of businesses reported making a profit in their first year of operations, and about 17 percent had profits greater than $100,000.
- One-quarter of businesses had at least two employees.
- Most of the equity raised by businesses came from the owners themselves.
- Thirty percent of businesses in the study were owned by women.

For more findings from the first three rounds, check out: http://www.kauffman.org/kfs/.

We encourage you to complete the fourth round of this important study online at www.kauffmansurvey.org using the following secure login ID and Password:

Login ID: «username»
Password: «password»

In appreciation, you will again receive $50. All information you provide will be kept confidential, and Mathematica Policy Research, Inc. will not release any information that can be linked to you or your business. If you have questions, please call Pat Jones toll free at 877-542-6725, or me directly at 609-750-2018. You may also email the study team at KFS@mathematica-mpr.com.

Thank you in advance for your continuing participation.

Sincerely,

Betsy Santos
Survey Director
Frequently Asked Questions

What is the purpose of the Kauffman Firm Survey?
The Kauffman Firm Survey (KFS) is a research study sponsored by the Kauffman Foundation of Kansas City. The study’s purpose is to learn about the challenges involved in owning and operating a new business.

Did our business already complete this survey?
Your business completed earlier rounds of this survey. At this time, we are asking about your business during calendar year 2007. Your input in this round is important. Since your business has been scientifically selected to participate, we cannot replace it.

Why are you asking about Year 4 of my business?
We are interested in following new businesses like yours from year to year as they continue to develop and operate. By studying businesses over the crucial early years of their growth and development, we can begin to understand what factors help businesses succeed in becoming established. No other study has examined as many new businesses in as much detail.

Will I be paid for participating?
You will receive $50 again as a “thank you” for completing the interview.

What if my company is no longer in business or I have sold my business?
We want to know if you if your company is no longer in business or you have sold it. Take a few minutes to access the Web survey or call Pat Jones at 1-877-542-6725 to tell us what happened to your business.

Will I get to see the results of the study?
The Kauffman Foundation is committed to sharing information from this study. Included in this mailing are results from earlier rounds of the study. For more findings from the initial rounds of the study, visit www.kauffman.org. Results of this round will be posted as soon as it is completed.

Will the information I provide be kept confidential?
Yes. Information that you share will be kept private by the study investigators. Information provided will be used for research and statistical purposes only by the Kauffman Foundation, its contractors, and collaborating researchers for the purpose of analyzing data and preparing scientific reports and articles. Any information that is publicly released (such as statistical summaries) will appear in a form that does not personally identify your business or any individuals involved with the business.
Will I be asked to make a donation to the Kauffman Foundation?
No. This study is solely a research study. At no time will you be asked to buy anything or contribute money to any foundation. Additionally, your name and your business name will not be sold or provided to anyone.

What is the Kauffman Foundation?
The Kauffman Foundation is a private foundation dedicated to studying and promoting entrepreneurship in the United States. For additional information about the Kauffman Foundation, please visit its web site: www.kauffman.org

Who is Mathematica Policy Research?
The Kauffman Foundation has hired Mathematica Policy Research, Inc. (MPR), an independent research firm, to conduct the study. MPR is an independent research firm based in Princeton, New Jersey known for its high-quality, objective research designed to support decision making on the nation’s most pressing issues. For additional information about MPR, please visit the company’s web site: www.mathematica-mpr.com

How can I contact you with further questions?
If you have questions about this study, please call Pat Jones toll-free at 1-877-542-6725, or email the study team at KFS@mathematica-mpr.com. By mail, the study team can be contacted at:

Kauffman Firm Survey
Mathematica Policy Research, Inc.
P.O. Box 2393
Princeton, NJ 08543-2393
We still need your help!

Your business is one of only 4,500 businesses in the Kauffman Firm Survey. Your continued participation is vital to studying new business development.

If you haven't done so already, please complete the questionnaire at www.kauffmansurvey.org. You will receive $50 as a “thank you.”

If you have lost your login ID or password, or have questions, contact Pat Jones at 1-877-542-6725, or email KFS@mathematica-mpr.com.
Dear «CEO_Prefix» «LastName»: [NOTE: USE «FirstName» IF «CEO_Prefix» IS MISSING]

We would like to thank you again for your past participating in the Kauffman Firm Survey, sponsored by the Ewing Marion Kauffman Foundation. Recently, we contacted you about participating in the fourth round of the study, but at that time you were unable to speak with us. I wanted to personally explain to you how important your continued cooperation in the survey is to the success of this critical study.

New businesses are vital to the economic future of the United States, and yet little is known about the challenges of running a business in the early years of development. Your continued participation in this, the largest longitudinal study of new businesses ever performed, will provide the Kauffman Foundation with a greater understanding of the challenges involved in owning and operating a new business. As such, your completion of the interview will contribute to the Foundation’s mission of supporting entrepreneurship.

In appreciation of your time, you will receive $50. Know that everything you report will be kept confidential, and no information will be released that can be linked to you or your business. If you have questions, please call Pat Jones toll free at 877-542-6725, or me directly at 609-750-2018. You may also email the study team at KFS@mathematica-mpr.com.

Sincerely,

Third Follow-Up

Annotated Questionnaire

April 6, 2009
A. INTRODUCTION

INTRO: Hello, my name is ______________. I’m calling on behalf of the Kauffman Foundation. May I speak with (OWNER NAME/the owner or CEO of [NAME BUSINESS])?

OWNER NAME = Second Follow-Up Respondent for Section A.

OWNER NAME — PROCEED WITH INTERVIEW ........ 01
OWNER NAME — BAD TIME/CALL BACK ............... 02 ➔ GO TO A2a
OWNER NAME NOT AVAILABLE ......................... 03 ➔ GO TO Inform
OWNER NAME NO LONGER WITH BUSINESS ........ 04 ➔ GO TO A1a [then A4web if A1a=1]

BUSINESS NO LONGER IN OPERATION .................. 05 ➔ GO TO A10
DON’T KNOW............................................... d ➔ THANK AND TERMINATE

A1a. Your business has been participating in the Kauffman Firm Survey. Last year we asked you some questions about [NAME BUSINESS]’s operations in 2006. Now we’d like to ask about calendar year 2007.

We’d like to confirm that the name of the business is [NAME BUSINESS] and that [NAME BUSINESS] is still operating.

[NAME BUSINESS] IS THE CURRENT NAME AND [NAME BUSINESS] IS STILL OPERATING ........ 01
THE BUSINESS NAME IS INCORRECT ................... 02 ➔ GO TO A2Web
[NAME BUSINESS] IS OUT OF BUSINESS ............... 03 ➔ GO TO A10

A1b. We’d like to confirm that you are [OWNER NAME] and you are you are still an owner of [NAME BUSINESS]?

[OWNER NAME] IS THE RESPONDENT AND IS STILL AN OWNER OF [NAME BUSINESS] .................. 01

[OWNER NAME] IS THE RESPONDENT AND IS STILL AN OWNER OF [NAME BUSINESS], BUT CORRECT [OWNER NAME]’s NAME ....................... 02 ➔ GO TO A4aWeb
RESPONDENT IS NOT [OWNER NAME] .................... 03 ➔ GO TO A4Webz
THE RESPONDENT [OWNER NAME] IS NO LONGER AN OWNER OF [NAME BUSINESS] ........... 07 ➔ GO TO A5a Box
A1c. We’d like to confirm that the title of your position is [TITLE]? Is that correct?

YES ........................................................................................................... 01 ➔ GO TO A5
NO ............................................................................................................. 00
DON'T KNOW ...................................................................................... d ➔ GO TO A5
REFUSED ................................................................................................. r ➔ GO TO A5

A1d. What is your job title?

INTERVIEWER: ENTER JOB TITLE.

_________________________________________________________ UPDATE TITLE

GO TO A5

A2a. I’m sorry. When would be a better time to reach (you/[OWNER])?

INTERVIEWER: ENTER CALLBACK DATE AND TIME.

READ: Is this the best number to reach you?

INTERVIEWER: UPDATE CONTACT INFORMATION AS NEEDED.

Thank you very much. Good-bye.

THANK AND TERMINATE

A2Web. What is the correct business name?

INTERVIEWER: TYPE IN BUSINESS NAME.

A3Web. Is this a corrected spelling, a name change but the same business, or a different business?

SPELLING CORRECTION .........................01 ➔ GO TO A1b
NAME CHANGE/SAME COMPANY ..........02 ➔ GO TO A1b
DIFFERENT COMPANY .........................03
A3Webz. We are trying to find out what happened to [NAME BUSINESS]. Is [NAME BUSINESS] still in operation?

YES ................................................................. 01 ➔ GO TO A1b
NO ................................................................. 00 ➔ GO TO A10
DON'T KNOW .................................................. d ➔ THANK AND TERMINATE
REFUSED ............................................................... r

A4Webz Is [OWNER NAME] still an owner and actively involved in running [NAME BUSINESS]?

IF NEEDED: By actively involved, we mean providing regular assistance or advice with day-to-day operations of the business rather than providing only money or occasional operating assistance.

C. BUSINESS CHARACTERISTICS

All of the following questions I’m going to ask are about [NAME BUSINESS]. Some of the questions will ask to confirm information about your business which you provided to us previously. As we go through the interview, please tell me if any of the information about your business is incorrect and needs to be updated.

C1z.  Our records show that [NAME BUSINESS] had a legal status of [OWNERshipModel]. As of December 31, 2007, is that still the legal status of [NAME BUSINESS]?

YES.................................................................01  ➔ GO TO C1a

NO .................................................................00

DON’T KNOW ...............................................d

REFUSED .........................................................r

[C1z_Confirm_Legal_Status_3]
I’m going to read you a list of some different forms of legal status a business can have. As of December 31, 2007, which form of legal status did [NAME BUSINESS] have? Was it a . . .

READ LIST AND READ DESCRIPTIONS AS NEEDED:

**Sole Proprietorship:** A type of business ownership in which a business is owned and managed by one individual and no subchapter S-corporation or C-corporation has been established.

**Limited Liability Company:** A cross between a corporation and a partnership, and offering some of the benefits of both. Similar to S-corporations, income produced by a limited liability company flows through to owners (known as “members”) who pay their own taxes as individuals. Unlike S-corporations, however, limited liability companies are not subject to as many government restrictions.

**Subchapter S-Corporation:** Corporations in which all profits and losses are passed through to shareholders, just as they are passed through to partners in a partnership.

**C-Corporation:** Legal entities separate from their owners that may engage in business, make contracts, own property, pay taxes, and sue and be sued by others.

**General Partnership:** An association of two or more people who co-own a business for the purpose of making a profit and no subchapter S-corporation or C-corporation has been established.

**Limited Partnership:** A partnership in which one or more partners are general partners who manage the business and others are limited partners who invest in the business but forego any right to manage the company.

F. BUSINESS FINANCES

F1. Now I’d like to ask about [NAME BUSINESS]’s financing. Businesses can get money from the savings or investments of the owner(s), money from spouses, family or other individuals, from companies, borrowing in an owner’s name, venture funds, or by borrowing in the name of the business. Some of the funds must be paid back and other funds represent an equity stake or share of the business. We will ask some questions about what happened during calendar year 2007, some questions about what has happened since the business began, and other questions about balances as of December 31, 2007.

F1a. First, in calendar year 2007, did [you/OWNER B-J] put any of your own money into [NAME BUSINESS] in return for an ownership share of the business? Please do not include any money borrowed from others or from credit cards.

IF NEEDED: This would include all additional money invested by [you/OWNER B-J] in the business during calendar year 2007.

Another way to finance a business is debt financing. Debt is money borrowed that has to be paid back with or without interest.

We will be talking about categories of debt based on who is responsible for paying it back. For each category, I’ll ask you about several sources of debt business owners or businesses can use to fund operations. We want to make sure that any business-related debt is reported in the right category, and is reported only once. I will identify each category and remind you when I change categories. Here is the first category.

I’m going to ask you about some different types of debt financing you may have borrowed in your name on behalf of [NAME BUSINESS]. For each, please tell me if you used this type at any time during calendar year 2007. Did you use [NAME FINANCING OPTION FROM LIST]?

**F7b. IN BELOW LIST, FOR EACH DEBT FINANCING OPTION BUSINESS REPORTED, ASK:** How many [NAME DEBT FINANCING OPTION] did you use to finance the operation of the business during calendar year 2007?

G16. **IF CONTACT INFORMATION COLLECTED AT BASELINE, FIRST, OR SECOND FOLLOW-UP:**

Here is the information we have for a contact person. This information will be held in the strictest confidence, and will only be used if we cannot contact you or someone else associated with the business at the current business phone number or address.

**INTERVIEWER:** PLEASE ASK FOR ANY INFORMATION THAT IS NOT FILLED IN.

**IF CONTACT INFORMATION IS BLANK FROM BASELINE, FIRST, AND SECOND FOLLOW-UP:**

In case we are unable to contact you, can you provide a name and contact information for a person besides yourself who would know how to reach you or someone else associated with [NAME BUSINESS]? All information collected will be held in the strictest confidence, and will only be used if we cannot contact you or someone else associated with the business at the current business phone number or address.

REFUSED........................................................................ r

THANK AND TERMINATE
This memo provides information about the longitudinal KFS data file, which includes data collected during the Baseline, First Follow-Up, Second Follow-Up, and Third Follow-Up Surveys. This includes information on how item non-response was handled within variables in the data file, as well as a description of variables not documented in the KFS questionnaire. It also documents variables used in constructing the survey weights and all constructed variables. Several of the variables included here were provided with the Dun & Bradstreet (D&B) listings of sampled businesses that may provide additional context during analysis. For variables derived directly from the KFS Baseline, First Follow-Up, Second Follow-Up, and Third Follow-Up questionnaires, the annotated versions of these questionnaires serve as the codebooks.

I. NON-RESPONSE CLEANING STEPS

All values for “Don’t Know” and “Refusal” responses were recoded to blanks (“.”) in all variables.

II. VARIABLE-SPECIFIC INFORMATION

Variable names in the longitudinal dataset are similar between the Baseline, First Follow-Up, Second Follow-Up, and Third Follow-Up Surveys. With the exception of MPRID and the credit risk variables, all variables in the data file will have a suffix that corresponds to a round of data collection. Baseline variables contain an “_0” suffix, First Follow-Up variables contain an “_1” suffix, Second Follow-Up variables contain an “_2” suffix, and Third Follow-Up variables contain an “_3” suffix.

Unless indicated, the variables in this memo are listed without a suffix if the variable name is the same across all rounds.
A. Weighting and non-response adjustment variables - Baseline

<table>

III. CONSTRUCTED VARIABLES

The data file includes constructed variables for ease of analysis. These fall into several categories, each of which is explained below. Variables using Baseline data are denoted by a “_0” suffix, First Follow-Up variables with the “_1” suffix. Similarly, variables using Second Follow-Up data have a “_2” suffix and Third Follow-Up data have a “_3” suffix.

A. Total Intellectual Property Variables

These variables create a total number of patents, copyrights, or trademarks the businesses possessed at the time of each interview. For each type of intellectual property, the variables were constructed using data from the following questions:

- “Indicator” questions, such as Question D3a (“Does the business have any patents?”)
- “Exact value” measures, such as Question D3b (“How many patents does the business have?”)

The construction was specified by the rules provided in the table below.

<table>
<thead>
<tr>
<th>Intellectual Property Variable Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Condition</td>
</tr>
<tr>
<td>“Indicator” variable = 0</td>
</tr>
<tr>
<td>“Exact value” variable &gt; 0</td>
</tr>
<tr>
<td>“Indicator” variable = BLANK</td>
</tr>
<tr>
<td>“Indicator” variable = 1 and “Continuous” variable = BLANK</td>
</tr>
</tbody>
</table>

The following variables were created using these specifications:

Total_Patents
Total_Copyrights
Total_Trademarks
B. Amount Variables

These variables were constructed for the specific types of equity, debt, revenue, assets, and liabilities the businesses possessed at the time of each interview. For each type, variables were constructed using data from the following survey questions:

- “Indicator” questions, such as Question F1 (“First, in calendar year 2004, did you put any of your own money into the business in return for an ownership share of the business?”)
- “Exact value” measures such as Question F2a (“How much of your own money did you put into the business during calendar year 2004?”)
- “Range” questions asked of respondents who could or would not provide an exact figure

The construction was specified by the rules provided in the table below.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Value of Constructed Variable</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Indicator” variable = 0</td>
<td>0</td>
</tr>
<tr>
<td>“Exact value” variable &gt; 0</td>
<td>Value of “Exact value” variable converted to range value</td>
</tr>
<tr>
<td>“Indicator” variable = 1 and “Continuous” variable = BLANK</td>
<td>Range value</td>
</tr>
<tr>
<td>“Indicator” variable = BLANK</td>
<td>BLANK</td>
</tr>
<tr>
<td>“Indicator” variable = 1 and “Continuous” and “Range” variables = BLANK</td>
<td>BLANK</td>
</tr>
</tbody>
</table>

The range values for these amount variables are listed in the table below:

<table>
<thead>
<tr>

</tr>
<tr>
<td>8</td>
</tr>
<tr>
<td>9</td>
</tr>
</tbody>
</table>
B. Amount Variables (continued)

This process was used to construct the following variables:

Tot_Equity_Owner_1_R
Tot_Equity_Owner_2_R
Tot_Equity_Owner_3_R
Tot_Equity_Owner_4_R
Tot_Equity_Owner_5_R
Tot_Equity_Owner_6_R
Tot_Equity_Owner_7_R
Tot_Equity_Owner_8_R
Tot_Equity_Owner_9_R
Tot_Equity_Owner_10_R
Tot_Equity_Spouse_R
Tot_Equity_Parents_R
Tot_Equity_Angels_R
Tot_Equity_Companies_R
Tot_Equity_Govt_R
Tot_Equity_Vent_Cap_R
Tot_Equity_Other_R
Tot_Pers_CredCard_Line_Resp_R
Tot_Pers_CredCard_Bal_Resp_R
Tot_Pers_Loan_Bank_Resp_R
Tot_Bus_CredCard_Line_Resp_R
Tot_Bus_CredCard_Bal_Resp_R
Tot_Pers_Loan_Fam_Resp_R
Tot_Pers_Loan_Other_Resp_R
Tot_Pers_Loan_Other_Owners_R
Tot_Pers_CredCard_Line_Othrs_R
Tot_Pers_CredCard_Bal_Others_R
Tot_Pers_Loan_Bank_Others_R
Tot_Bus_CredCard_Line_Others_R
Tot_Bus_CredCard_Bal_Others_R
Tot_PersLoan_Fam_OtherOwners_R
Tot_Pers_Loan_Other_Owners_R
Tot_Pers_Loan_Other_Owners_R
Tot_CredCard_Line_Bus_R
Tot_CredCard_Bal_Bus_R
Tot_Loan_Bank_Bus_R
Tot_Cred_Line_Bus_Line_R
Tot_Cred_Line_Bus_Bal_R
Tot_Loan_NonBank_Bus_R
B. Amount Variables (continued)

Tot_Loan_Fam_Bus_R
Tot_Loan_Owner_Bus_R
Tot_Loan_Emp_Bus_R
Tot_Loan_Govt_Bus_R
Tot_Loan_Other_Bus_R
Tot_Loan_Other_Ind_R
Tot_Bus_Debt_Other_R
Tot_Trade_Finan_R
Tot_Asset_Cash_R
Tot_Asset_Acct_Rec_R
Tot_Asset_Inv_R
Tot_Asset_Equip_R
Tot_Asset_LandBuild_R
Tot_Asset_Veh_R
Tot_Asset_Other_Bus_Prop_R
Tot_Asset_Other_R
Tot_Liab_Acct_Pay_R
Tot_Liab_Pension_R
Tot_Liab_Other_R
Tot_Revenue_R
Tot_Loss_R
Tot_Profit_R

The following constructed variables are specific to the First, Second, and Third Follow-Up Surveys. The First Follow-Up variables with the “_1” suffix are shown below. The Second Follow-Up and Third Follow-Up variables are denoted by a “_2” suffix and “_3” suffix (respectively) instead of the “_1” suffix.

Tot_Equity_AllYrs_Owner_01_R_1
Tot_Equity_AllYrs_Owner_02_R_1
Tot_Equity_AllYrs_Owner_03_R_1
Tot_Equity_AllYrs_Owner_04_R_1
Tot_Equity_AllYrs_Owner_05_R_1
Tot_Equity_AllYrs_Owner_06_R_1
Tot_Equity_AllYrs_Owner_07_R_1
Tot_Equity_AllYrs_Owner_08_R_1
Tot_Equity_AllYrs_Owner_09_R_1
Tot_Equity_AllYrs_Owner_10_R_1
Tot_Equity_Spouse_AllYrs_R_1
Tot_Equity_Parents_AllYrs_R_1
B. Amount Variables (continued)

Tot_Equity_Angels_AllYrs_R_1
Tot_Equity_Comp_AllYrs_R_1
Tot_Equity_Govt_AllYrs_R_1
Tot_Equity_Vent_Cap_AllYrs_R_1
Tot_Equity_Other_AllYrs_R_1
Tot_Pers_Loan_Bank_Owed_Resp_R_1
Tot_Pers_Loan_Fam_Owed_Resp_R_1
Tot_PersLoan_Other_Owed_Resp_R_1
Tot_Pers_Other_Owed_Resp_R_1
Tot_PersLoan_Bank_Owed_Othrs_R_1
Tot_PersLoan_Fam_Owed_Othrs_R_1
Tot_PersLoan_Othr_Owed_Othrs_R_1
Tot_Pers_Other_Owed_Others_R_1
Tot_Bus_Loans_Bank_Owed_R_1
Tot_Bus_Loans_Nonbank_Owed_R_1
Tot_Bus_Loans_Fam_Owed_R_1
Tot_Bus_Loans_Owner_Owed_R_1
Tot_Bus_Loans_Emp_Owed_R_1
Tot_Bus_Loans_Govt_Owed_R_1
Tot_Bus_Loans_OtherBus_Owed_R_1
Tot_Bus_Loans_OtherInd_Owed_R_1
Tot_Bus_Loans_Other_Owed_R_1

The constructed variables below were named according to the reference year mentioned in the indicator question and therefore differ across the rounds. Data about business funds being withdrawn for personal use were not collected during the Baseline Survey. The First Follow-Up Survey collected data about the incidence and level of this activity occurring in calendar years 2004 and 2005, the Second Follow-Up Survey collected data about 2006 and Third Follow-Up about 2007.

Tot_Personal_Use_2004_R_1
Tot_Personal_Use_2005_R_1
Tot_Personal_Use_2006_R_2
Tot_Personal_Use_2007_R_3

The following constructed variables are specific to the Third Follow-Up Survey only.

Tot_Res Dev R_3
Tot_Equity_AllYrs_Owner_11_R_3
C. Expense Variables

The variables created for total expenses, wage expenses, and total profit or loss are similar to those detailed in Section III.B above, but at these questions there was no “Indicator” question. The variables were constructed using data from the following types of survey questions:

- “Exact value” measures such as Question F17 (“How much, if any, did the business pay in expenses during calendar year 2007?”),
- “Range” questions asked of respondents who could or would not provide an exact figure at the “Exact value” variable.

The construction was specified by the rules provided in the table below using the series of equity questions as an example.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Value of Constructed Variable</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Exact value” variable = 0</td>
<td>0</td>
</tr>
<tr>
<td>“Exact value” variable &gt; 0</td>
<td>Value of “Exact value” variable converted to range value</td>
</tr>
<tr>
<td>“Exact value” variable = BLANK</td>
<td>Range value</td>
</tr>
<tr>
<td>“Exact value” and “Range” variables = BLANK</td>
<td>BLANK</td>
</tr>
</tbody>
</table>

These variables used the same amount range values as those described above in III.B. The following variables were created using these specifications:

Tot_Expenses_R
Tot_Wages_R
D. Total Amount Variables

These variables create total amounts of equity, debt, revenue, assets, and liabilities the businesses reported at each interview, combining the values reported for each individual type. For example, the variable “Tot_Equity_Owner_Operators_R” sums all values in the owner-operator variables (Tot_Equity_Owner_1_R through Tot_Equity_Owner_10_R, Tot_Equity_Owner_11_R_3), which is then translated into the amount range values described above in III.B and III.C. The variables created in this way are listed below along with the component variables.

<table>
<thead>
<tr>
<th>Total Amount Variables</th>
<th>Variables used to create</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tot_Equity_Owner_Operators_R</td>
<td>Tot_Equity_Owner_1_R, Tot_Equity_Owner_2_R, Tot_Equity_Owner_3_R, Tot_Equity_Owner_4_R, Tot_Equity_Owner_5_R, Tot_Equity_Owner_6_R, Tot_Equity_Owner_7_R, Tot_Equity_Owner_8_R, Tot_Equity_Owner_9_R, Tot_Equity_Owner_10_R, Tot_Equity_Owner_11_R_3*</td>
</tr>
<tr>
<td>Tot_Equity_OwnerOper_AllYrs_R_1**</td>

</tbody>
</table>

** First, Second, and Third Follow-Up Up data only. Variables shown for First Follow-Up. Second and Third Follow-Up variables will have a ".2" and ".3" suffix respectively.
E. Variables constructed using the “Quarter” range

These variables were constructed for questions (in the Baseline Survey only) collecting the month in 2004 businesses first paid unemployment insurance or FICA taxes. The components of the constructed variables include:

- Exact values such as Question B9 (“For what month in 2004 were the first unemployment taxes paid”),
- “Range” questions asked of respondents who could or would not provide an exact figure value – the response choices were “The 1st quarter of 2004 (January to March),” “The 2nd quarter of 2004 (April to June),” etc.

<table>
<thead>
<tr>
<th>Range definition - Quarter</th>
<th>Value</th>
<th>Range (months)</th>
</tr>
</thead>
<tbody>
<tr>

<td>4</td>
<td>10-12</td>
</tr>
</tbody>
</table>

This process was used to construct the following variables:
UI_Month_R
FICA_Month_R
MEMO TO: Alicia Robb and E. J. Reedy, Ewing Marion Kauffman Foundation  
FROM: David DesRoches and Betsy Santos  
DATE: 4/6/2009  
PAGE: 24

F. Variables constructed using the “Hours” range

These variables were constructed for the question collecting the average number of hours per week owner-operators worked at the business. The components of the constructed variables include:

- Exact values collected at Question G1b (“During the time [NAME BUSINESS] was in business during 2004, how many hours in an average week did (you/[owner B-J]) spend working at [NAME BUSINESS]?”)

- “Range” questions asked of respondents who could or would not provide an exact value. The range definitions are provided below.

<table>
<thead>
<tr>
<th>Range definition - Hours</th>
<th>Value</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1</td>
<td>1-19</td>
</tr>
<tr>
<td>2</td>
<td>20-35</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>36-45</td>
<td></td>
</tr>
<tr>

<td>46-55</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>56-65</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td>66+</td>
<td></td>
</tr>
</tbody>
</table>

This process was used to construct the following variables:

- Total_Hours_Owner_01_R
- Total_Hours_Owner_02_R
- Total_Hours_Owner_03_R
- Total_Hours_Owner_04_R
- Total_Hours_Owner_05_R
- Total_Hours_Owner_06_R
- Total_Hours_Owner_07_R
- Total_Hours_Owner_08_R
- Total_Hours_Owner_09_R
- Total_Hours_Owner_10_R
- Total_Hours_Owner_11_R_3*

* Third Follow-Up data only.
G. Variables constructed using the “Age” range

These variables were constructed for the question collecting the ages of owner-operators of the business. The components of the constructed variables include:

- Exact values collected at Question G4 ("How old will (you/[OWNER B-J]) be on (your/his/her) next birthday?")
- “Range” questions asked of respondents who could or would not provide an exact value. The range definitions are provided below.

<table>
<thead>
<tr>
<th>Value</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>18-24</td>
</tr>
<tr>
<td>2</td>
<td>25-34</td>
</tr>
<tr>
<td>3</td>
<td>35-44</td>
</tr>
<tr>
